Union Board Presentation

'Dutch' Dancers to Give Tulip Festival Preview

By KIM MEYER
State News Asst. Night Editor

Eight Dutch Klompin Dancers will invade the Union concourse today at 4 and give Spartan students a preview of the annual Holland Tulip Festival.

The dancers, who will perform again tomorrow at 4, are presented by the Union Board who is sponsoring its annual trip to the Tulip Festival on May 19.

The dancers, seven of them from Holland, wear original Dutch costumes. The dance presented in the Union will be typical of those performed at the festival in Holland, but on a much smaller scale.

Long hours of practice go on for many weeks prior to the big four days of the festival when hundreds of girls will perform native Dutch dances.

This will be the 29th year Holland has celebrated its tulip festival. It all started with a biology teacher who thought the city would be more attractive if it had flowers to decorate it.

Union Board sponsored buses will leave East Lansing promptly at 7:30 a.m. May 19 from the Union and will leave Holland for the return trip at 5:30 p.m.

Students may sign up for the trip in the Union Board office. Deadline is May 15.

Students are advised to bring their own lunch, due to the crowded conditions in Holland during the festival.

Withdrawal Period Closes Today

This is the last day to withdraw from school and still receive a 'N' or no grade in class.

All students voluntarily leaving the university by today are entitled to a refund of half of their fees.

In order to withdraw, one must obtain permission from the dean of students, approval of his own dean, present the approved permission and his receipt for fees to the Registrar's office and present the receipt for fees and the Registrar's office authorization to the cashier's office. Only then will he be entitled to a refund.

All withdrawals after today will receive a failing grade and no refund of any fees.

Delta Sig Pi's Finish Remodeling House

The members of Delta Sigma Pi have a surprise for their alumni. Recapturing and refurbishing the living room was only half the task. They also redecorated the den by substituting a stained paneled wall for the traditional white mantle over the fireplace and adding new furniture and draperies.

Pinocchio Gets Memorial

COLLADO, Italy (AP)—The President of Italy Monday dedicated a statue of a little boy with a long nose, the immortal Pinocchio.

Serious voices and lifting music echoed in the green hills of Tuscany as this home town of the mischievous puppet celebrated its greatest day.

Thirty thousand people lined the streets. Some were lucky enough to see the unveiling of the angular, bronze memorial, built with contributions from children of 36 nations.

President Giovanni Gronchi, six members of Parliament and many other officials came for the dedication.

All this was because 14 years ago an unemployed journeyman named Carlo Lorenzini scribbled the story of a wooden boy, carved by a cabinetmaker. The boy's nose grew ever larger.

Lorenzini wrote Pinocchio's story under the pseudonym Collodi in honor of his home town.

Five years ago Mayor Orlando Anselotti of Pavia, the nearest big town, whose administration also takes in Collodi, decided Pinocchio and his author should be honored with a memorial.

The funds should come, he decided, not only from Italian children, but from children the world over.

So the mayor, who once taught English in Illinois Wesleyan University and married an American girl, began his campaign. He promised the voters here the memorial if he won.

American children contributed more than \$1,000. In return each donor got a "certificate of the friends of Pinocchio" permitting the holder to tell one little lie without having his nose grow.

This is the target on the island of Namu in the Bikini Atoll that the crew of a B-52 jet bomber will be aiming at when they are scheduled to air-drop a hydrogen bomb in a mammoth detonation designated as "Shot Cheroke". The blast, originally scheduled for May 8 has been postponed because of bad weather.

H-Blast Time Stays Indefinite

EDITOR'S NOTE: The following dispatch is written by one of 15 news media representatives who will witness a hydrogen bomb detonation in the Pacific this week, weather permitting. It is sent to the State News by special arrangement.

By MARVIN MILES
Los Angeles Times Correspondent

ENIDWETON, May 14 (AP)—The U. S. Atomic Energy Commission today announced that the hydrogen bomb test scheduled for May 14 has been postponed because of bad weather.

The Atomic Energy Commission acknowledged only that there will be "more than ten" shots. Most of the 17 will be smaller yield (atomic) devices, with Cheroke believed to be the largest scheduled detonation, equal to perhaps ten million tons of TNT.

It was learned also that the hydrogen bomb is strictly the property of the Air Force and is being loaned to the Atomic Energy Commission for the test.

If the drop is postponed, or aborted, the U. S. must return the bomb to the Air Force. Therefore, if it is loaned to the AEC, it must be returned to the Air Force by a certain date.

When newsmen aboard the USS Albatross gathered for a weather briefing Monday morning, they had some hope the explosion would be finally scheduled for Wednesday.

But the report from the joint task force noted whatever confidence they may have had.

"The conditions forecast for Tuesday and Wednesday are not acceptable. Very winds will continue to blow from the north across Bikini Atoll. Fall-out for a detonation under these conditions would fall on uninhabited islands in the Marshalls."

Only a small grain of hope was contained in the weather report. "There is little evidence now of a favorable change to Wednesday morning, although such a possibility must not be ruled out."

It was learned unofficially Sunday that there will be 17 shots in Operation Redwing, making the current Pacific proving ground test program the largest ever held. The previous record was 14 shots at the Nevada test site last year.

About 60 per cent of Americans are home owners compared to 40 per cent 15 years ago.

They not only keep a close check on normal winds in horizontal motion, but on the slow-moving vertical flows found here also. Flows that could dump radioactive matter closer than expected to the point of detonation if they were considered.

Their findings go to a special forecast prediction unit that uses the newly-developed fallout computers that display on a television-like tube the predicted fallout pattern in a fraction of a second after the complex data is fed into the main line.

"I confess," said Eden, "that what I care is that the outcome of our discussions with the Soviet leaders should, in truth, prove to be, as I have said, the beginning of the beginning."

In complete quiet, Eden went on. "I intend to safeguard that possibility at all cost. I believe that that is the policy of the Soviet leaders and it is for that reason that I deplore this debate and will say no more."

The Laborites had unsuccessfully tried to bait him into explaining why naval Commander, Ret. Lionel Huxley Crabbe, the frogman, was spotted near a Russian cruiser.

The frogman is officially listed as "missing presumed dead" in the cold waters of Portsmouth Harbor while diving near the cruiser that last month brought Soviet Premier Nikita Khrushchev on a visit to Britain.

The House of Commons was packed and hushed. Sir Winston Churchill, hunched in a front row seat, stared at his successor.

State Court Ousts Trucks Act

LANSING (AP)—The State Supreme Court today, following the lead of the U. S. Supreme Court, threw out as unconstitutional the Trucks' Anti-Subversive Act.

The Trucks Act, also known as the Michigan Communist Control Law, provided for annual registration of Communist Party members with the State Police and prohibited listing their names on Michigan primary or general election ballots.

The State Supreme Court's ruling had been a foregone conclusion since the U. S. Supreme Court had thrown out a similar law in Pennsylvania in April.

These and three other sections defining the terms "Communist," "Communist Party" and "Communist Front Organization" were specifically struck down by the court.

The two other sections of the law, not specifically challenged, were not expressly included in the scope of the opinion, written by Justice Emerson R. Boyles.

One of these sections makes it a felony to sabotage or attempt to sabotage national defense facilities and institutions in the state.

The other provides that no person may hold non-elective office in the state government or any of its subdivisions "where reasonable grounds exist that such a person is a Communist Party member or member of a Communist front organization."

Constitutional lawyers at the capitol were not immediately certain whether the effect of the opinion would be to render the entire act unenforceable or if those sections specified as unconstitutional.

The second annual Michigan Police Community Relations Conference, being sponsored by the Michigan school of police administration and public safety Sunday at Kellogg.

Cooperation on the part of the conference will include a national conference of chiefs and justices along with Michigan national law enforcement organizations.

This Institute is an important professional approach to law enforcement problems, points out Dr. James A. Birchman, director of the Michigan school of police administration, who joined the Michigan administration staff in 1954.

The conference will feature a two-day session on "Police and the Community," and sessions to show ways in which police departments and community leaders may cooperate to improve intergroup relations.

The department of chemistry has selected Donald W. Bern, a third year graduate student, as the university's first Monsanto Fellow.

Bern, whose home is in Lancaster, Penn., will hold the award during the 1956-57 academic year. A 1953 alumnus of Franklin and Marshall college, he is working under the direction of Dr. Robert M. Herbst.

The fellowship is the first MSU has received from the program for financial aid to scientific education set up by the Monsanto Chemical company, St. Louis, Mo.
