# Variety Of Activities Set For Weekend

Thousands of mothers, fathers, sisters and brothers will be guests of Michigan State today through Sunday as they join students, faculty and alumni in annual Parents' Weekend festivities.

Beginning with the 44th annual Water Carnival Friday night, the weekend will also offer concerts, art exhibits, sport events, open houses, tours, special shows and festivals.

"Slipped Disc: Rock Back to Bach" will feature 37 floats made by 74 housing units. The show begins at 8 p.m. both Friday and Saturday.

Floats will be judged and the winners will be announced Saturday night.

Abrams Planetarium is presenting two extra programs in addition to the regular weekend show. "Fire in the Sky" will be shown at 10 a.m. Friday and Saturday.

Tickets must be obtained from the Alumni Relations Office. Price is 50 cents for adults and 25 cents for children 12 years old and under.

The Richards' Quintet will perform at 8:15 p.m. Friday in the Music Auditorium. Two groups will present concerts Sunday---the Women's Glee Club will sing at 4 p.m. in the Music Auditorium, and the Singing Statesmen will perform at 3 and 8 p.m. in the Erickson Kiva.

A recital at Beaumont Tower will be given from 2-2:45 p.m. Sunday. There is no charge for any of the musical events.

Kresge Art Center will exhibit works of graduate students during Parents' Weekend. The exhibits may be seen from 8:30 a.m. - 5 p.m. Friday, and from 2-5 p.m. Saturday and Sunday.

Many residence halls will hold open house for parents. Friday night Abbot and Mason halls will present an old fashioned "flick" night. A talent show will be given Saturday afternoon and a fashion show Sunday afternoon.

The Brody Complex will present a talent show at 2 p.m. Saturday in the Bailey lobby. Emmons Hall will have an open house as well as the Del Rays performing at 2 p.m. Sunday.

South Wonders will give flowers to mothers at their open house from 2-4:30 p.m. Sunday. Refreshments will be served in the lobby.

All living units will be open to guests from 2-5 p.m. Sunday.

The International Club will have its annual International Festival, "Hello, World!" Saturday. Exhibits from all over the world will be on display from 9 a.m.- 11 p.m. Saturday in the auditorium. There will be a floor show at 2 p.m. and another at 8 p.m.

The Beal-Garfield botanic gardens, which include about 3,000 different plant species, are open all day. Garden personnel will be available from 7:30 a.m.-4:30 p.m. The Horticulture Gardens, located behind the Student Services Building, features 9,000 tulips, and is also open every day.

The lacrosse team will meet with Notre Dame at 2 p.m. Saturday in the field across from Case Hall. A golf tournament is scheduled at 1 p.m. Friday and a track meet against Notre Dame at 1 p.m. Saturday.

The College of Agriculture is featuring the "Outdoor Living and Recreation Show" from 10 a.m.-9 p.m. Friday and Saturday. The show will take place in arena One of the Men's IM as well as Parking Lot I, in front of the IM. It will feature outdoor living exhibits, mobile homes, and camper trailers. Scuba diving and other water activities will be demonstrated at a swimming show at 3:30 p.m. Saturday in the indoor pool of the Men's IM.

# Jewelry Finances Sophomore

A student in an advanced jewelry class earns his college education by selling his art objects.

He is Christopher E. Gabel, Midland sophomore. He said he first got interested in working with jewelry through a high school crafts class. He began buying equipment and now has a studio in his residence hall containing over \$300 worth of equipment.

Gabel, an Honors College student, experiments with imaginative ideas which result in improvisations, such as the use of a vacuum cleaner for a vacuum pump.

He sells his work mostly to friends and acquaintances but recently had some of his objects accepted by the America House in Birmingham, which sells handcrafted home furnishings, jewelry and art work. These works are judged by a panel before acceptance, he said.

Gabel said he hopes to do independent study in the technical aspects of casting this summer, which he hopes will be applicable to work in future classes at MSU.

He said he has some untried ideas for using ultrasonics for fabricating and finishing metals and the development of a liquid-suspended abrasive process for finishing metals.

Gabel said he feels the technical aspects of art and creativity are often neglected.

"If the craftsman can use mechanical tools and processes to free him from the time-consuming problems of the material itself," he said, "he is freer to creatively express his ideas."

"One can also go too far and become a victim or slave of technology when he is so busy working with techniques that creativity suffers," Gabel said.

He said he does not believe a middle point has been reached yet.

The expression of original concepts is the objective of jewelry classes just as for any other studio art course at MSU, Margaret A. Yuill, associate professor of art, said.

The student first learns the basic techniques of sawing, hard soldering, stone setting, lost-wax casting, coloring and polishing metal, forging, stamping and forming, said Miss Yuill, who has taught craft classes here since 1947.

A project requires the use of a combination of many of these

techniques in its realization, she said. Many of the girls in her class make their own wedding rings.

A secondary objective of the course is an awareness of how these techniques may be taught, since many of the students plan on teaching art, she said.

The student is graded on imaginative conception, uniqueness of design, level of craftsmanship and willingness of experiment, she said. He is "working three-dimensionally in metal and gem stones."

He usually uses silver or gold, she said, but he may use other metals more suited to the character of the piece he has designed, such as pewter, brass or copper. Wood, ivory, bone, plastic, glass or any other material

may be combined to help him realize his concept, Miss Yuill said.

"Working with jewelry is similar to engineering," she said, "because you have to figure out ahead of time how to work within the limits of the material."

Miss Yuill said she does not believe in teaching techniques for their sake only. "In art technique alone is meaningless," she said. "It is only when the technique is used to express an idea that it is valid."

The advanced jewelry course is an elective and the students in this course work on bigger projects, applying the techniques they learned in the previous jewelry course.

## Airborne Duo Pledge Troth In Wire Story

BEIRUT, Lebanon (AP)—The couple balanced on a crossbar 82 feet above the ground exchanged rings while a Jesuit priest wearing sneakers and secured by a rope read the words of the engagement ceremony.

"I promise," said Lothar Lange and Carla Mueller when the Rev. Naoum Atallah asked if each would marry the other. A crowd of 500 below applauded.

"Regular engagements on the ground are okay for ordinary people, but we wanted something unusual," said Lothar, 26, who stars with Carla, 20, in the high wire act of the touring "Bavaria Show."

The ceremony took place in a Beirut stadium during their regular performance Saturday night.

Engagement ceremonies with a priest in attendance are a custom of some Eastern Christian sects. The two German acrobats are Roman Catholics, but they decided on the ceremony for dramatic effect.

JEWELER AT WORK--Chris Gabel, Midland sophomore, has his own jewelry shop in his room in two southeast Wilson Hall. Creations from the shop are sold commercially. Photo by Russell Steffey

## Busy Bees Beneficial To People

By HELEN ROTHNEY  
State News Staff Writer

May on the MSU campus is a delicate month. The trees are whiskered with new leaves. Many of the flowers have blossomed and the bushes bloomed. A student sitting on the grass strums his guitar.

A solitary walk through the campus is relaxing just because everything looks great after a cloudy, slushy winter.

This warm, clear weather is great for bees, too. Honey is on their minds. And they find the brilliant colors and perfume of the new blossoms inviting. Diligently they gather nectar for honey from the different kinds of flowering plants.

According to the Michigan Dept. of Agriculture, nearly seven million pounds of honey worth \$1.1 million were produced last year in Michigan. However, bees make a major contribution to man's welfare in another way.

While the bees are busy with their honey, they unknowingly collect pollen from any plant they visit, from MSU's flowers to the \$150 million worth of orchard and field crops.

Cross pollination enables plants to produce seeds. And seeds, either directly or indirectly, produce the major part of our food supply.

"We wouldn't eat as well as we do if it weren't for the bees," said E.C. Martin, Dept. of Entomology. Bees, with their intimate relationship with flowers and their hairy bodies which collect the sticky pollen, are nature's major pollinating insects.

The beauty of our campus each year can be credited partially to the bees.

So, if you see a "bee in residence" on your solitary walk, encourage him.

## Calling All Alarms

SHERMAN, TEX. (UPI)—Twice Highway Patrolman Kenneth Crossley tried to call headquarters on his police radio. He was interrupted both times when a burglar alarm sounded at a store across the street from his car. Both proved to be false alarms, and Crossley soon realized that his car radio had triggered the system.

**Dorms Offer Tea, Talent, Art Shows**

Activities ranging from talent shows to teas will complement the annual open houses held in residence halls on Parents' Weekend, Friday and Saturday.

Abbot and Mason Halls are combining efforts to present an old-fashioned flick night Friday, a talent show Saturday afternoon, a fashion show Sunday afternoon and an art display on exhibit the entire weekend.

The flick night will feature Charlie Chaplin films, and the talent show, which will be held at 2 p.m. Saturday in the Abbot Upper Lounge, will feature a past resident of the complex who, as master of ceremonies, manifests an entertaining Cassius Clay Syndrome.

The women of Mason will model at a fashion show held in their lower lounge.

The art display will be judged by faculty of the Art Dept. Prizes in various media will be awarded.

Last year's "best of show" winner was commissioned by the dormitory for permanent display.

An art contest is also tentatively being planned by the joint cultural committee of the east complex dormitories for the weekend.

Residents of Fee, Holmes, Akers and McDanel will display their work during Parents' Weekend in the main Fee lounge.

Brody residents plan to entertain parents and visitors at a talent show, which will be held in the Bailey Hall lobby at 2 p.m. Saturday. The master of ceremonies, participants and talent judges are residents of the complex.

The Brody Board is tentatively planning to open the weekend with a street dance Friday evening.

The women of West Holmes, West Wilson and West Mayo will be serving refreshments to their guests from tea tables set up in their dining halls.

All living units, including those on South Campus and along Circle Drive, as well as East and West Shaw, will be open to guests 2-5 p.m. Sunday.

**Windmill Wins**

HOLLAND (P)--The 200-year-old windmill imported from The Netherlands and reassembled last year as a Holland tourist attraction landmark was named Ottawa County's Community Achievement winner Tuesday in Michigan Week competition. The \$475,000 civic project was dedicated in April, 1965, with Prince Bernhard of The Netherlands as special guest.

**Cook To LBJ; 'I'm Boss'**

WASHINGTON (UPI)--Sen. J. William Fulbright's remarks about "American arrogance" prompted President Johnson to show the senate foreign relations chief a letter he got from his cook, Zephary White.

"Mr. President, you have been my boss for a number of years and you always tell me how you want to lose weight. And yet you never do much to help."

"Now I am going to be your boss for a change. Eat what I put in front of you and don't ask for any more and don't complain."

"See, Bill," said Johnson. "You don't have to be worried. Nobody is likely to get too big for his britches with notes like that."

# Foreign Students Say 'Hello, World'

Students from 21 nations will say "Hello, World" in their most important cultural exchange event of the year, the International Festival.

Preparation for the festival began weeks ago with individuals and members of the nationality groups planning and rehearsing their acts for the stage show.

The displays for each nation also had to be planned, and the necessary items had to be collected. Members of some groups had to go as far as Detroit to get exactly the "right" costumes and artifacts for their displays.

The culmination of all the efforts of these students will be Saturday, with the showing of the displays and the presentation of the stage show at the MSU Auditorium.

Throughout the day, the foreign students will welcome visitors to displays showing the arts and crafts of their nations. Many students will be at their displays in national dress to answer questions about their countries.

The annual stage show will be presented twice Saturday, at 2 p.m. and at 8 p.m. This show is

the result of the combined efforts of students from the 15 main cultural areas of the world to present a colorful and authentic program. The students themselves are the performers.

This year, 12 nationality

groups and eight individuals will take part in the stage show. The show is comprised of singing, dancing, drama and other arts of the participant nations.

The theme of this year's festival, the 22nd annual event of

its kind at MSU, is "Hello, World." It tries to convey the desire on the part of international students to meet the rest of the world and to have the rest of the world meet and take interest in them.

"The festival is to acquaint members of the campus community and members of the surrounding communities with the culture and ideas of the rest of the world," says Yolanda Romano, Utica junior and chairman of this year's Festival.

The International Festival is a joint effort of the International Club members, the different nationality club members, independent students and the Office of International Programs.

The International Club, the main sponsor of the festival, represents some 1,000 foreign students from 80 countries, as well as students from the United States.

Both parts of the festival, the displays and the stage show, are in the MSU Auditorium, and both have free admission. The displays will be open 9 a.m.-11 p.m., in the basement and available classrooms of the Auditorium. The stage show will be presented twice, at 2 p.m. and at 8 p.m., in the main Auditorium.

## GLEE CLUB CONCERT

# Statesmen To Sing Sunday

The MSU Singing Statesmen will present their annual spring concert at 3 and 8 p.m. in the Erickson Kiva.

The 65 Statesmen, under the direction of Loren Jones, assistant professor of voice, are famous for the quality of their tone. This unity of tone is especially evident in their rendition of Bach's "May God Smile on You," and in the old Welsh song, "The Marshes of Rhuddlan."

A new addition to the Statesmen's program is the use of a brass section in Giovanni Gabrielli's "Christ Has Arisen."

Lighter music is by no means slighted, and the group performs spirited arrangements of such favorites as "Nothin' Like a Dame" and "Drunken Sailor."

The Singing Statesmen is the all-University men's glee club. During the year, the group visits communities in Michigan and surrounding states. Their spring tour this year took them through Michigan, Indiana, Illinois and Ohio. Planned for 1967 is a trip through California and the Western states.

## Horticultural Paths Attract MSU Visitors

It is estimated that hundreds of students, their families and friends, will walk through the Horticultural Gardens between Student Services and Horticulture Buildings this weekend.

These gardens are not naturally occurring phenomena, and involve a great deal of work. Ornamental Plant Management, a course offered by the Horticulture Dept., provides much of the upkeep for the gardens, which are used as practical labs for the class.

The 38 students enrolled in Horticulture 325 with Richard F. Stinson, associate professor of horticulture, also utilize nearby greenhouses for practical experience. Activities emphasized in these laboratory situations include sowing seeds, planting annuals, pruning roses, transplanting shrubs and learning about pest control and garden equipment.

Course time is divided between lectures and lab projects. The primary function of the course is to teach students the planting, maintenance and management of ornamental outdoor material, including flowers, lawns, trees and shrubs.

Another phase of the course is a required field trip which this term will include trips to several Detroit area horticulture projects.

Students enroll in Ornamental Plant Management for many reasons, Stinson said. For majors such as floriculture, landscape architecture and horticulture, it is required. Some students take it because it is related to their major field. Still others enroll because they find it practical, interesting, or just because it is exciting "to see beautiful results such as the Horticultural Gardens," Stinson said.

# Foreign Students Face Adjustments

EN PASSANT--An international chess game in the U.N. Lounge in the Union Building draws international kibitzing. Left to right here are: G. Hussain Sumbal, Pakistan; Yolando Romano, Italy; Sihua Baties, Guatemala; and Mahesh Banatwala.

By ARTHUR C. KLEIN JR.  
State News Staff Writer

One out of every 33 students you see on campus is likely to be a foreign student, according to figures from August G. Benson, foreign student adviser.

MSU enrolled 925 foreign students this spring term, down from 1,002 fall term and 950 winter term.

They represent nations in all major areas of the world with the largest percentage coming from Asian countries, said Benson.

Eighty per cent of the foreign students are male and 80 per cent are in graduate school, the remaining 20 per cent are working for undergraduate degrees, he continued.

Sixty per cent of the students are paying their own expenses. The others are on scholarships granted by our government, their home government or private groups.

"Many of the foreign students are older and more mature than the average student, 300 of these students on campus have their families here with them," Benson stated.

"A great number of the students were businessmen, teachers, professors or civil service workers back in their home countries before deciding to come here to study."

"Foreign students arriving here have four basic adjustments to make," Benson said. The first, and probably the most obvious,

is to our language.

The second is adjustment to American academic procedures. Many of the students come from countries where there are no mid-term or final examinations; they take one test at the end of the year which covers all the material they have studied that year.

The third, and possibly the most interesting for them, is the adjustment to our society and culture.

The fourth is adjustment to their new role and status. They may have had positions of great importance within their home communities, but here they are only students among thousands in a huge university.

It is the job of MSU's foreign student advisers, such as Benson, to assist the students in gaining their academic goals and to help them make the adjustment to their new life here.

The advisers try to provide the opportunity for foreign students to meet Americans, see American communities and participate in normal American family life.

Programs are set up to coordinate students with an American family for a weekend of first-hand living and working together, said Benson.

"These foreign students are a fine resource for local communities. Many of them visit schools or group meetings to explain their native customs and culture. This project is very popular with the students and most of them participate," he commented.

Foreign students can join with students from their native countries in nationality clubs. Through these they sponsor activities which promote increased understanding between their culture and ours.

## In His Heart He Was So Right

AUDUBON, Iowa (AP)--Sometimes it doesn't pay to be right.

Mrs. Wayne Dudgeon came home complaining the police radar unit made a mistake in clocking her car at 38 miles an hour in a 25-mile zone. It was impossible to accelerate that fast in the area, she contended.

Her husband disagreed and said he would prove she was wrong.

With Dudgeon driving this time, they returned to the area. Sure enough, the car speedometer showed 38 miles an hour at the point where Mrs. Dudgeon had been arrested.

Unfortunately, the police radar unit still was on the scene. Dudgeon received a speeding ticket.

# Canada, Asia Are Best Represented

Approximately 3 per cent of the total student body is from foreign countries.

The largest group of students from any individual country is from Canada. There are 140 Canadians on campus this term.

The general area most represented on campus is Asia. Asian countries and their student numbers on campus are: Cambodia, 1;

China, 71; Hong Kong, 12; India, 113; Indonesia, 6; Japan, 29; Korea, 28; Laos, 1; Malaysia, 1; Nepal, 4; Pakistan, 27; Singapore, 2; and Thailand, 27.

Latin American countries include Argentina, 11; Brazil, 23; British Guiana, 1; Chile, 5; Colombia, 6; Costa Rica, 1; Ecuador, 3; El Salvador, 1; Guatemala, 3; Jamaica, 6; Mexico, 4; Peru, 3; Trinidad, 1; Uruguay, 1 and Venezuela, 27.

African representatives are: Congo, 2; Ethiopia, 4; Ghana, 3; Ivory Coast, 1; Kenya, 5; Liberia, 2; Malawi, 1; Morocco, 1; Nigeria, 49; Rhodesia, 3; Somali Republic, 1; Union of South Africa, 2; Sudan, 2; Tanzania, 4; Uganda, 1; Upper Volta, 1; and Zambia, 1.

European students on campus are: Belgium, 1; Denmark, 2; England, 8; Finland, 1; France, 3; Germany, 9; Ireland, 4; Norway, 4; Poland, 1; Portugal, 1; Scotland, 3; Sweden, 2; Switzerland, 5; and Greece, 9.

Near East countries represented are: New Zealand, 1; Philippine Islands, 30 and the Ryukyu Islands, 18.

All figures are tentative, pending final checks on departures.

## Petnapping Boring Topic

Cats and dogs have been reigning on Capitol Hill, as a topic of concerned conversation, virtually the entire session so far.

Down have come torrents of words about dognapping, catnapping and various other offenses against these pets, committed because they're in such demand for laboratory research.

Efforts to do something about this could drag on and on. For, as Rep. W. R. Poage, D-Tes., reported:

"There must be something like 60 or 70 bills, at least, introduced in this house."

Rep. Maston O'Neal, D-Ga., took occasion to provide this intelligence:

"In our state no animal is the subject matter of larceny unless specifically made so by statute.

O'Neal said perhaps an extremely broad interpretation might be put on a section of the law making it unlawful to take an animal 'fit for food. But then he made this seem rather doubtful:

## FEATURES WATER ACTIVITIES

# Outdoor Living Show Set

The 1966 Outdoor Living and Recreation Show, the first of its kind to be presented on campus, will be highlighted by a demonstration of water sports and safety by the Spartan Swim Club at 3:30 p.m. Saturday in the Men's IM Pool.

The show consists of indoor and outdoor exhibitions of natural resources and recreational activities which revolve around the theme of summer fun. It is co-sponsored by the Agricultural Council, a student organization of the College of Agriculture, and the national Mobile Home Manufacturers' Assn.

The show will be open 10 a.m.-9 p.m. Friday and Saturday in parking lot I near the IM Building.

On exhibit in the lot will be 35 campers and mobile homes from six dealers in the Lansing area.

Inside the IM Building there will be demonstrations by the Red Cross safety unit and slides from the National Rifleman's Assn. hunting exhibit.

Both days of the show fashions for outdoor living from Knapp's will be shown, and products from the Horticultural and Forestry Departments will be on display.

The water program will consist of canoeing, clowning and competitive swimming.

The club, according to diving coach John Narcy, will give a scuba diving exhibition, which will emphasize safety.

Lola Miller, president of Green Splash, will perform a water ballet routine.

Walter Turner, president of the Agriculture Council, said the four

clubs which are primarily concerned with this outdoor show are the Fish and Wildlife Club; the Cantelever Club, a forest products organization; the Forestry Club; and the Parks and Recreation Club.

Admission is free.

ON THE ROCK--Charlotte Berlin, Hudson sophomore, decorated the commemorative stone in front of Student Services Building marking the site of the first plant spraying. Photo by Tony Ferrante

## Orchard Spraying Got Its Start On Campus

"First in Michigan, a pioneer in America" states the marker in front of the Student Services Building that commemorates the first attempt in the control of orchard disease by spraying.

A diseased apple orchard once stood where the Student Services Building now stands. That was 77 years ago. In May of 1889 Levi Rawson Taft used those apple trees in his experiment to control orchard disease.

With a small pump and a pail Taft sprayed some of the trees with a fungicide which was a modified eau celeste, similar to Bordeaux mixture. The results of his experiment were very encouraging. While seven eights of the apples on the unsprayed trees were scabby, only one ninth of the apples on the sprayed trees

were infected.

The success of this attempt coupled with further experiments led to the publishing of a "Spraying Calendar" in 1895. This calendar, written by Taft and G.C. Davis of the Entomology dept., was simple but effective against insects and disease in Michigan at that time.

The money for spray and other agricultural research was partly provided by federal funds. MAC President Edwin Willets was instrumental in seeing that the annual state stipend of \$15,000 was made available to existing organizations and not given to competitors. He hoped this was to further scientific research and to make the information useful through teaching and extension programs.

# Take Little Ones To The Museum

Are you wondering what to do with little brothers and sisters this weekend?

Wonder no more. The University Museum is extending its hours from 10-5 instead of regularly 1-5 p.m. Saturday and Sunday.

Adults or students cannot enjoy an exhibit unless they have had past experience which relates to it, said Leslie C. Drew, curator of exhibits. Parents often find the general store on the ground floor most interesting because they have experienced something like it in their childhood.

The store is a conglomeration of hardware, meat, foods, textiles and a post office typical of the turn of the century. The store, in operation for 65 years in East Lake, was the focal point of the community, containing approximately 5,000 different items.

Children between the ages of 2-13 are generally drawn to the mummy and Egyptian tomb located on the first floor, said Drew. The mummy was given to the Museum by a former MSU student who is presently working in Bolivia. It has been a part of the collection for 65 years.

Also of interest to parents is the steam locomotive located south of the stadium. The locomotive, built just before the diesel fuels originated, was a part of the Chesapeake and Ohio railway system and is 21 years old. Its former route was from Detroit to Chicago. Museum officials were unable to transport the locomotive to the Museum itself because there are no railroad tracks in the immediate vicinity.

The exhibit will be open from 10-5 Saturday and Sunday, with two attendants stationed to answer questions. The locomotive may be seen any weekend during May and June from 1-5 p.m., and by appointment during the day. To make appointments for small groups, students should call the Museum at 355-2370.

The first floor of the University Museum, which entertains approximately 135,000 visitors per year, is devoted entirely to Michigan, its natural and historical aspects, said Drew. The ground floor deals with anthropology and the evolution of the earth while the third floor contains the Hall of Military History, North American Life and minerals, Drew added.

## Justin Morrill Sets Mature Climate

By CHRIS RAUSER

A progressive college within a college and a feeling of community living within the University describes the infant Justin Morrill College.

The college, established last fall, is designed to provide a liberal education in the humanities, social sciences and natural sciences. Emphasis is placed on international understanding and service.

"We appear to be building a community and this community will provide a climate for maturity--emotional and intellectual," said D. Gordon Rohman, dean of the college.

He said that community living should make the curriculum more effective.

"I look to this more than to tricky courses to provide our real contribution to improved undergraduate education."

All students must take at least one foreign language, which is taught 10 hours a week for eight credits a term. This year the college offers French, Russian and Spanish, which are taught for a year and equivalent to three years of study.

The natural sciences feature courses prepared for non-specialists in math, geology, physics and biology and one term of an elective in science within the college.

The professors teach their specialties to the students in the humanities and social science programs. Students are required to take one Justin Morrill course in the humanities and social science fields. The courses in these areas vary with the interests of the instructors teaching them.

"There is a difference between Justin Morrill College and the large University in that the professors teach something new and they seem more enthusiastic about teacher. There is a definite feeling of community living and a feeling that we are something. This is what I like most of all," Karen Meek, Midland freshman, said.

"Justin Morrill has given me a broad outlook on national and international problems. The courses have taught me to write about and understand world situations," said Mark Morse, Fairfax, Va. freshman.

There are 400 students enrolled in JMC. When the college was formed, its enrollment was fixed at 1,200 students. Each year the college may enroll 400 students. This includes freshmen and transfers from other majors within the University.

The students in JMC take a "field of concentration," which emphasizes flexibility and choice in choosing courses and is based on individual needs and desires.

When the students entered Justin Morrill College in the fall they were assigned to Rohman and Roger Stimson, an assistant professor, for counselling. The college is in the process of forming an advising system, and each student will be assigned an advisor.

The college is preparing sample descriptions of various fields in many areas to give students an idea of what curriculum are available.

The advanced JMC student will take a field of concentration in the University at large. This will be a major of 40 hours or more. He will take elective courses outside his major for another 30 hours. When the JMC student reaches senior status he will return to the college to study a topic in which he is interested. He will do this in field work, a seminar or a thesis.

Rohman said the college hopes to accomplish two objectives by next fall: to increase the number of optional courses and to schedule these courses to provide a minimum number of conflicts.

JMC students are publishing a literary magazine, the Eikon, the only quadri-lingual publication on campus. It is written in four languages and includes essays, short stories, reviews and drawings submitted by students.

A term of study abroad is offered the summer following the freshman year. The college recommends this but it is not required. This summer 70 students will go to Lausanne, Switzerland, to study French. Eight will study Spanish in Madrid, and 20 will go to Moscow to continue their study of Russian.

Rohman said that the college is progressing successfully in its first year. He said that through community living there has been a feeling of closeness to the college and an understanding of what is expected of the student.

## LIFE WITH A 3600

## My Mother, The Machine

Scientists adore them, teachers tolerate them, maintenance men sweat over them, and 35,000 MSU students are overwhelmed by them.

"Them" are the University's four IBM computers. There's the 3600, the 1620 and the twin 1401's. To many students the quartet regulates their lives.

They grade the students' papers, assign them classes, print the grade reports each term, locate dormitory rooms for them and then insure them three squares a day.

If that's not enough they make up the University payrolls, account for scholarships and fees, keep track of enrollment and pre-enrollment, provide cost-flow programs for agri-businessmen and even test the farmers' soil.

They may be monolithic, but at MSU they have become nearly a way of life.

With the aid of a \$400,000 National Science Foundation grant in the spring of 1962 the "age of the computer" began at MSU.

Now the "electronic brains" can even keep track of books in the Library.

A new program initiated this term is an automated system of library circulation control. Each student is provided a punched IBM card with which to withdraw certain books. This circulation of books is controlled by the computer.

Although many instructors can do no more than tolerate the "mechanized minds" many professors utilize the 1401 computer for item analysis. The computer will tell the professor how well he constructed his test—if his students haven't already told him.

It does not grade the test but rather analyzes its contents. Surprisingly, on this computer-oriented campus there are about 1,500 students per term taking computer-related courses.

All engineering majors are required to meet the machine in their freshman year, before they really comprehend the power which controls their academic destiny. Business majors, understandably, must also complete a computer course.

In addition, many courses, both graduate and undergraduate, (in mathematics, statistics, physics, chemistry, the social sciences, business and almost all departments of engineering) are related to properties, methods or uses of electronic computers.

Although the 3600 computer is used for instructional purposes, students are warned to look but not to touch.

The twin 1401's, located in ancient Olds Hall, are primarily responsible for applications in the administrative area.

The Data Processing Center is a service organization to the University, although some students question that. It issues no records nor does it publish reports. It does not deal with the student personally, but with University departments.

University officials recently purchased another computer, the Sigma 7, for the Cyclotron Laboratory. The computer, which will be delivered in December, will be used for nuclear physics experiments.

Many students might justifiably feel the computer is automating their life, that they are being replaced by a machine. However, the scientists will point out, the advances made through the computer in all fields far exceed any disadvantages people may think it has.

But as student 419959 said the other day to student 317707: "I don't really feel like a number at all, really."

## New Dormitory Scheduled For Fall

Hubbard Halls, the newest and most striking of University residence halls, will open their doors this fall.

These 12 story buildings, now the largest on campus, will house 1,214 students.

The height of the building serves mainly as a striking architectural feature, although efficient use of land area is another asset, says Lyle Thornburn, manager of residence halls.

Thornburn said that as many as 20,500 students will be living in University residence halls this fall as compared with 18,198 last fall.

Most of the new buildings which have been built or are now under construction are living-learning type dormitories which have classroom facilities as well as living facilities for the students.

Thornburn said that as many as 60 per cent of the students living on campus this fall will be living in living-learning dormitories.

In the last five years Case-Wilson-Wonders, Fee-Akers, McDonel and Holmes have been

new buildings of the learning type of complex. Other buildings which have been constructed since 1960 are Ernst A. Bessey Hall, Eppley Center and Owen Hall.

The only new residence hall last year was Holmes Hall, which now accommodates 1,276 students. The expansion to Owen Graduate Center was the only other addition in 1964. The expansion almost doubled the capacity of Owen which now accommodates 988 students.

Construction is now beginning for Holden Halls, which will be located near Wilson Halls. It is scheduled for the fall of 1967.

In addition to the great number of buildings on the campus, MSU has over 30 miles of roadway and 60 miles of walkway on the campus. There are also 16,500 parking spaces on campus, including 1,000 spaces in the new parking ramp and 1,600 in the new commuter parking lot.

It is estimated that more than \$248 million has been spent for land, buildings and equipment for the MSU campus.

## Welcome Parents!

# Kresge Features Graduate Art Work

By DENNIS P. BOLEN

Kresge Art Center, since its opening in 1959, has been the student's key to culture, enabling them to explore all areas of art either by actually delving into the work itself or by roaming its gallery and halls.

The \$2 million structure overlooking the Red Cedar River between the Auditorium and the Alumni Chapel was built mainly

through a grant from the Kresge Foundation.

The center is a multipurpose building in which are housed exhibits, some of which are permanent and University owned, some works done by the faculty and many traveling exhibits.

The building also houses classrooms and studios for painting, ceramics, industrial arts and sculpturing, plus faculty offices.

The opening of three additions to the center this year make the

facility one of the most advanced in the Midwest.

The additions include a studio-classroom wing, a sculpture wing and an extension of the existing gallery.

The new east wing includes five studio-classrooms, a seminar room and five offices. Erling B. Brauner, professor and chairman of the Art Dept., said that this area will be used primarily for basic studio courses and some advanced art education courses.

The sculpture wing, on the south side of the building, includes areas for a bronze foundry, direct metal work, wood and stone carving, plaster work, a graduate work area, general work area and two office studios. On either sides of the wing are landscaped courts for outdoor working and sculpture display.

The gallery addition, 25 by 90 feet, will be used primarily to house the many traveling shows that are exhibited at Kresge Art Center each year.

Paul Love, gallery director, said this addition to the gallery will allow the rest of the gallery, which will show faculty displays and the University's permanent collection, to remain open while the traveling shows are being changed.

Brauner said that the additions to the building will allow for internal expansion and remodeling of several departments such as ceramics, printmaking, jewelry and painting.

Love is solely responsible for choosing the many traveling

## Jailed Mom Wins A Point

MEXICO CITY (UPI)--City authorities acted Tuesday--Mexican mother's day--to provide temporary lodging for children whose mothers are in jail.

District Attorney Gilberto Suarez Torres announced that children under 12 left without care because of the arrest of a parent will be sent to the National Child Protection Institute (INPH).

The decision apparently was

a result of the widespread publicity given a woman who kept her small son with her overnight in jail because, she said, she had nowhere else to leave him.

Mrs. Gustavo Diaz Ordaz, Mexico's first lady, notified Suarez that children of arrested persons may be sent to the INPH for care until social workers can locate relatives. Mrs. Diaz is head of the institute.

## *A Sign Of The Times, Or Let's Brown-Nose The IBM*

SAN FRANCISCO (UPI)--Here is the transcript of a conversation between a grade school youngster named Mark and a computer attached to a typewriter:  
Computer: Hello, I am the friendly computer. Would you like to talk to me? Type yes or no, then press the key with R-S on it.

Mark: Yes.

Computer: Please type your name so I will know you.

Mark: Mark.

Computer: I am glad to meet you, Mark. Here is the first question. Does electricity go through wood easily?

Mark: No.

Computer: You smarty. How did you guess it? How long does a fly live?

Mark: One day.

Computer: You must be smart to know that. What is a baby frog called?

Mark: Pollywog is one name for them.

Computer: Good. What is a shillealagh made of?

Mark: I don't know.

Computer: You don't come from Ireland. Timmy wants to know the answer to this. What is 7 X 9?

Mark: 67.

Computer: Type again.

Mark: 63.

Computer: Very good, ring-a-ding. In baseball, how many balls walk the batter?

Mark: I think it is four.

Computer: You must know how to play baseball. What code has dots and dashes?

Mark: The Morse Code.

Computer: You get three stars. What are our two newest states?

Mark: Alaska and Hawaii.

Computer: You know your states. Where do kangaroos live?

Mark: In Australia.

Computer: Good. Do father kangaroos have pockets for babies?

Mark: No.

Computer: You are a kangaroo expert.

# MSU Police Have History Of Service

By BOBBY SODEN  
State News Staff Writer

A white light on top of the power plant flashed on. . . a patrolling Campus Police officer found a nearby telephone and called headquarters.

Before 1950, a person needing police help had to call through the campus operator to the State Police who in turn called the Campus Police.

Since there were no two-way radios in their police cars at that time, police relied on the light atop a high pole to signal patrols.

MSU's Campus Police have come a long way since a part-time patrolman was hired to guard the university in 1928.

By 1937, campus protection was put under the supervision of the East Lansing police chief.

A full time police lieutenant, Charles Covell, was assigned to the campus in 1939. The remainder of the force were police administration students employed as part-time policemen.

There were not enough uniforms to go around, recalled Richard O. Bernitt, director of the Dept. of Public Safety. Since four years of Army ROTC was compulsory for all police administration majors, many wore the army uniform.

MSC assumed full control over the department of seven men in September, 1947. A.F. Brandstatter, presently the director of the School of Police Administration, was appointed chief of the Michigan State College Police.

Also in 1947, the campus was given 24 hour a day police protection, when the police began to work in three shifts.

The light blue stripe now worn by officers was added to the navy blue trousers in 1947, and cotton shirts were issued to replace the old wool shirts.

"Ike jackets," similar to waist length jackets worn by soldiers in World War II, were issued to all officers. These were worn until 1963 when the present slicker type "Berger car coat" was decided upon.

By 1950, the department consisted of 12 men while the student body numbered slightly over 20,000.

Also in 1950, Campus Police used the two-way frequency modulation radio for the first time, ending the use of the State Police frequency. The University presently shares a frequency with the East Lansing police.

In 1956, one year after MSC became a university, the police and safety services departments were combined in the Dept. of Public Safety.

Since then, a vehicle office has been added to the department. MSU's one and only policewoman was hired in 1956 and worked for a year.

By 1958, the department had grown to 23 men.

Between 1958 and 1960, three building watchmen worked for the Dept. of Public Safety. Each man was responsible for one of three buildings: Giltner, Men's IM and Natural Science.

In 1960, the individual buildings hired their own watchmen.

Brandstatter was relieved as director of the Dept. of Public Safety in 1960 to devote full time to being chairman of the school of police administration, a position he had held for several years.

Richard O. Bernitt, formerly the assistant director, became the new director.

The police division now has a strength of 38, including 32 police officers, 4 civilian desk clerks, and two parking patrolwomen.

MSU's police have built up a reputation as being one of the finest group of policemen in the country. The department has become a nationally known prime recruiting ground for top police administrators.

Fourteen of the officers hold bachelors degrees in varied fields. One man holds a masters degree and several others are working for theirs.

Nine former MSU policemen have become police chiefs for other departments.

An unusually young group, the average patrolman is approximately 26 years old.

"Through the years we have attempted to provide dedicated persons sympathetic with the University's existence and instilled with the philosophy of service, in addition to law enforcement," Bernitt explained.

The concept of service is evident in many phases of Campus Police action, such as transportation of sick and injured persons, aiding persons who are locked out of offices, location of missing persons, property checks and general assistance to citizens.

CAMPUS GUIDE--One of the many familiar jobs of the Campus Police is giving instructions to lost motorists.

# Campus Serves As Plant Laboratory

By DENICE ANDERSON  
State News Staff Writer

Every unusual, hardy, woody plant that can exist in Michigan's climate is displayed on the MSU campus.

Milton Baron, the University's landscape architect, said that the plant's hardiness is the determining factor of its ability to exist in Michigan. Michigan's temperature has been known to fall as low as 20 below zero.

Soil and moisture also play important parts in the survival of the 5,711 different woody trees and shrubs, Baron said.

MSU receives its varieties of plants and shrubs through different ways, Baron said. Some plants are obtained through exchanges with other gardens and arboretums, and some are introduced to MSU from a division in Maryland, he said.

"We also raise our own new hybrids," Baron continued. "We try to pick plants and shrubs that have never been on the campus before."

"They are kept track of through a rare plant list that is published every year," he said.

The publication tells where the plants were obtained and when they came.

"Many of the plants come to MSU as small seedlings. They are not large enough to stand lawnmowers or students," said Baron, "so they are raised in the campus' maintenance unit until they are large enough to be planted."

"Sometimes a plant doesn't appear until five years after the University has received it," he said.

Plants have been received with no names, Baron said. MSU once had the honor of naming a plant that accidentally was discovered mixed with other plants.

The campus of MSU has been described as an outdoor laboratory, said Baron. The different vegetations have been studied by various classes, including those of forestry, botany, land-

Young Bananas

Amaryllis

Sego Palm

Cactus

scape architecture and horticulture.

MSU has been designed to recampus. The architecture has been such that the campus is like a big, lovely park, said Baron.

The topography of MSU is not the best, he continued, but we look to the tree forms, open spaces and rolling terrain to make the campus what it is.

MSU is one of the first col-

leges to have a curriculum in landscape architecture. "We have maintained a tradition in respect to open space and ornamental vegetation," he said.

T. Glenn Phillips, after whom Phillips Hall was named, was responsible for many of the curving drives and the placement of buildings, said Baron. Phillips was a former landscape architect.

The grounds are cared for by employees of the University who plant and "baby" the plants, said Baron. Students also help care for the vegetation.

Every new building has a budget for site development, said Baron, and this budget includes plant materials. The plants aren't just "put around" he said, they are placed to soften the buildings lines and to make the entrances look more important.

The large trees provide shade and they also make softer lines

## Unfair Competition

CARSON CITY, Nev. (UPI)--The Nevada Gaming Commission Tuesday ordered gambling ended at the Silver Nugget Casino in North Las Vegas until the club stops clothing women 21 dealers in see-through blouses.

Major Riddle, majority stockholder of the club, said he would obey the ruling rather than close. The club had been using dealers in the transparent blouses since last Friday.

have special permission.

The Beal-Garfield Botanical Gardens, found between the Library and the Women's IM, is one of the oldest botanic gardens in terms of continuous operation in the country.

The Horticulture Gardens and Evergreen Collections are also very beautiful displays, he said.

Information about the different gardens may be obtained by contacting the curator at the Manly Miles Building.

## Hidden Lake Has Gardens And Trails

Hidden Lake Gardens, 407 acres of rolling countryside, was given to MSU in 1947 to insure the future maintenance and development of the valuable exhibits of plant collections.

The gardens, granted to MSU by the late Harry A. Fee, an Adrian businessman, are located near Tipton, about 50 miles southeast of Lansing.

Fee, after whom Fee Hall was named, was interested in scenic land formations and beautiful landscapes. He purchased the property and personally supervised its early planning and development.

The gardens creates a landscape picture that gives rise to a demand for more beautiful surroundings. A combination of natural and man-made features offer sufficient variety to attract anyone interested in the outdoors.

A new garden center building was recently donated to the gardens by Ray Herrick of Tecumseh. Also present is a greenhouse.

Juniper Hill, once formed by glacial debris, is now the site of an excellent planting of Junipers and many other ornamental vegetation.

The major points of interest are connected by almost six miles of roadway. Walking trails are present and picnics are limited to special organized groups by reservation only.

# Echoes From Wells When The Gang Gave 'Em Hell

By LARRY SCOTT  
State News Staff Writer

"We are, we are, we are,---we are the gang from Wells  
And when we get to heaven we'll give the good old yell  
And bums from Bills and Abbey can sizzle down in hell."

Such was the sentiment of the "gang from Wells" back in 1919. A landmark on the MSU campus for 61 years, Wells Hall had become what might be called "institution" by some.

It was one of three buildings originally residence halls at Michigan Agricultural College. The other halls, affectionately referred to above as "Bills and Abbey," were Williams and Abbot halls.

Wells was divided into six wards with dividing firewalls as a safety measure to insure against a repeat performance of the 1905 blaze which completely destroyed the original Wells Hall.

There was a separate entrance to each ward and five rooms in each of the three floors. The attic served as a meeting place for literary societies while the basement comprised the dining room with a seating capacity of 300.

Dorr Baumer, grandfather of Chris Hogan, Lansing sophomore, recalls:

"They used to have eating clubs, and club D at Wells was where all the poor people ate."

"You went inside and waited until they opened the doors, and when they did, there was a grand rush, and you always got all you wanted."

In 1938, provisions for student living replaced the society rooms in the attic, linoleum was laid, and shower rooms were installed in each ward.

These features greatly enhanced the building and applications for the fall term of 1938 far exceeded the supply of rooms with accommodations for 200 students.

Lyle Thorburn, manager of Wells in 1949 and 1950 and manager of residence halls today, had this to say:

"We all felt kindly toward the building. It had a charm about it and you were proud to be associated with it."

"When you asked someone to pass something at dinner, that's exactly what they did."

"There was a kind of togetherness that you couldn't find in the newer and bigger dorms."

Edward B. Blackman, in charge of academic programs for University College, said,

"It was different from today's dorms with those long hallways--they all look alike inside."

According to these men, Wells was not just a building with a name on it, but it was a place where your friends were.

In 1958, after almost 50 years of service as a dormitory, Wells went into semi-retirement and served as an office building.

Last month, Wells, one of MSU's most prominent "senior citizens," succumbed to a disease which attacks the very structure of a building until it is virtually unrecognizable; it is called "Librarium Wingitis."

## Curtain Falls On Opera Shop

This is the last year for the MSU Opera Workshop.

Founded two years ago, the workshop is a credit course with the dual purpose of providing background experience for future teachers and performance opportunities for prospective professional singers.

But after several successful productions, the activities of the workshop have been curtailed by a Music Dept. committee and director Daniel Wright has resigned his post at MSU.

Wright, who functioned as class instructor, stage director and conductor, organized the course in three term-long divisions. The first term's work was with operatic acting, the second concerned stage direction, and the third term focused on the technical theater.

The class project for the term is usually a one-act opera.

So far the workshop has produced Douglas Moore's "Gallantry," Act III of Offenbach's "Tales of Hoffmann," Vaughan Williams' "Riders to the Sea" and Wilder's "Sunday Excursion."

Last term, Gian-Carlo Menotti's "The Medium" was the first two-act opera presented by the workshop, and also the first time full orchestral accompaniment was used. This term's project was a production of Gilbert and Sullivan's "Trial by Jury."

## Carp In Library Pool

The goldfish that used to frequent the Library pool are of another era. The only fish in the murky depths now are carp.

Herb Moyer, group leader of North Campus Gardeners, said that because of the death rate of goldfish during the winters at MSU, the policy in the last few years has been to keep the two pools free of fish. Crews formerly stored the fish in other quarters over the winter, but this proved to be too costly. Since the water in the pools is

not continuously circulating, as in a stream, goldfish die sooner.

Carp, a relative of the goldfish, are sometimes thrown in the pools by students who catch them in the Red Cedar. The carp is a particularly sturdy fish and one of the few which can live in sometimes dirty and stagnant water.

Moyer commented that students who clean the pools, "reap quite a harvest of pennies," from those who still hold the romantic notions of wishing wells.

## Welcome Parents

Again this year we want to extend a warm welcome to you parents and students who have patronized our service. We shall continue to provide the best in clothing care at our consistently low prices.

## LAWYERS, TOO?

# Future Doctors To Enroll In Fall

MSU will have its first professional school next year, and could begin plans for a second one.

Twenty-five students will definitely enroll in the two-year medical school, and an appropriation to start a law school is now before the Michigan house of representatives.

The senate committee recommendation of \$350,000 to start a law school in the original MSU budget last month was something of a surprise to MSU students, but officials said they were delighted with the suggestion.

The senate later trimmed the proposed appropriation to \$250,000, which must also be passed by the house before MSU would receive the funds.

Although classes would probably not begin in this fall, any appropriations might go toward starting a collection of the library books necessary for a law school.

The College of Human Medicine, however, already offered its first course in winter term of this year. The Seminar in Medicine and Society (Medicine 499) was limited to about 20 seniors in the pre-medicine program.

Many of the courses proposed for the medical school are presently being taught in some form this year.

An anatomy course teaches cadaver dissection to graduate students in physical education and anthropology; the physiology course will be much like the one now offered to veterinary medicine students; laboratory work for Biochemistry 401 and 402 will be expanded.

This fall one residence hall will be assigned to medical students and also will house a laboratory, planned to serve as a general meeting place for the class and faculty.

The new College of Human Medicine also will be studying

the effectiveness of various approaches to medical education with a grant of \$160,000 from the Commonwealth Fund.

The grant will support three years of continuing and extensive research and evaluation study that will follow students through medical school and clinical training and into their careers.

The med school will begin in the fourth year to give students an opportunity to study biochemistry, physiology and anatomy before they receive their bachelor's degrees.

The fifth and sixth years of the medical school will include courses in pathology, microbiology and pharmacology, subjects normally taught in medical education.

Students will receive clinical experience in hospitals and doctors' offices in the Lansing area, as the nursing students do now.

Graduates of the two-year School of Medicine have been promised admission to the University of Michigan and Wayne State University four-year medical schools to complete their programs.

U-M and Wayne also have the only public law schools in Michigan now.

## Even Love Dies In The Winter

LONDON (UPI)--Magistrate's clerk James Stables said a check of the court records shows there is more matrimonial dissension in the winter than in the summer.

"I could draw a graph showing the number of divorce cases throughout the year. You would see the 'high' in the winter... and the 'low' in the summertime," said Stables.

"Let's face it," he added. "On a sunny day everything and everyone looks better--even one's wife or one's husband."

# Memorial Chapel Serves All Faiths

By FAYE UNGER  
State News Staff Writer

Walk through the doors of Alumni Memorial Chapel.

The names of 362 war dead from MSU are engraved on either side of the sanctuary entrance.

In the chapel walls, stones of many shapes and hues, marked with engravings, stand out from the regular blocks in the wall.

St. Lawrence Church, Nuremberg, Germany, the engraving in one stone reads, St. Paul's Cathedral, London, another reads.

There are 30 of these stones, picked from the rubble of European cathedrals bombed in World War II. Some are from cathedrals over 500 years old.

Alumni Memorial Chapel, a place of peace, is a memorial to the 6,800 MSU students who served their country in war. The stones and the list of war dead are reminders of sacrifices war demands.

First conceived in 1947 by a group called the Memorial Center Fund Committee, the Alumni Memorial Chapel was finally built in 1951 and dedicated in 1952.

The committee, mostly alumni, worked with the Alumni Advisory Council, to make the idea of a chapel a reality.

As originally conceived, an international house was to be built along with the chapel. Both were to overlook Beal Gardens

from a site located about where the library now stands.

Only the chapel was built, however, and its site was moved farther up the Red Cedar along Auditorium Road.

The alumni thought of the chapel as filling in the gap left when Old College Chapel was torn down to make way for Beaumont Tower.

Alumni Memorial Chapel today serves as a quiet retreat for students of all faiths.

Campus - oriented religious groups hold services here. Older student - related churches who find their home churches overcrowded, newer churches who do not yet have enough facilities and East Lansing churches trying to reach students on campus all use the chapel.

The weddings and wedding rehearsals jam the chapel schedule near the end of the terms, especially spring term.

Religious conferences and workshops meet here.

Performances of religious music, like the Music Department's Christmas vespers, take place in the chapel.

Fraternities, sororities and honoraries hold initiations here. Commencement ceremonies are held here.

A look at one week's schedule for the chapel may show a capping ceremony for the American Red Cross Gray Ladies one afternoon, a meeting of the Israeli Club the next evening, and a wedding rehearsal the next morning.

In the sanctuary of Alumni Memorial Chapel plain wood pews, plain walls and a beamed ceiling give a feeling of simplicity that invites all faiths. The altar, a simple rectangle, was designed after the chaplains' combination altars of World War II.

The stained glass windows lighting the chancel depict religion, brotherhood and patriotism. A group of parents of students at MSU donated these windows at the time the chapel was built.

The 12 windows in the east wall of the nave, paid for mostly by alumni, depict ideals and virtues such as work, community, truth, freedom of mind and leadership.

The 10 windows in the west

wall, paid for by campus groups, depict the history of MSU.

The Pels Company of the Netherlands built the O. W. Mourer Memorial Organ in the chapel. The organ was erected, tuned and voiced in the Netherlands, then dismantled, sent to the U.S. and reassembled here.

It contains 22 ranks of pipes with 1,331 pipes in all. An automatic pedal device changes registration to suit heavy or light combinations played on either keyboard.

The alumni donated most of the money to build the chapel.

STONES PICKED from the rubble of European Cathedrals, bombed during World War II, highlight the walls of the Alumni Memorial Chapel. The chapel is a memorial to the 6,800 MSU students who served in the war.

# Campus Chimes In Competent Hands

By DONNA CUMMINGS  
State News Staff Writer

One of the most popular carillonneurs in the United States, Wendell Westcott, assistant professor of music and carillon, has played most of the major carillons in the country and on several of the major carillons in Europe.

Three years ago Westcott concertized on one of the largest carillons in the world. Located in New York City's Riverside Church, the professor played the instrument as a guest recitalist.

In December, 1964, Westcott appeared on the "Today" show to discuss and demonstrate the carillon in connection with a New York docking of a carillon imported from Holland.

In keeping with the Christmas spirit, Westcott played "Santa Claus is Coming to Town" as the instrument was being unloaded.

Westcott played before a live audience of one-half million in New York City's 1965 Easter Parade in Rockefeller Center. He commented, "I was told Jayne Mansfield was in my audience." The professor played before the same number of people during his four-day appearance at the Tulip Festival in Holland, Michigan, last spring.

Most recently Westcott presented a Special Mother's Day recital at the Church of the Savior in Cleveland, Ohio. In June he will participate, as one of two Americans, in the Carillon Festival in Springfield, Illinois. Later in the summer he will travel to Chicago to participate in a Fourth of July celebration.

Westcott has concertized on several of the 40 tower carillons located on university campuses throughout the nation. He has played the instruments at the University of Montana, the University of Michigan, Iowa State University and, of course, MSU.

While studying in Europe Westcott concertized on several of the continent's major carillons. "Most carillons in Europe," said the professor, "are located in churches or town halls." This is different from the United States where carillons are often housed in free standing towers like Beaumont.

Westcott played the carillons in the town halls of Rotterdam, Holland; Burges, Belgium and Antwerp, Belgium.

A Lansing native, Westcott studied at the Royal Carillon School "Jef Denyn" in Mechelen for one year during 1956-57. Mechelen, according to the professor, is the first post of the carillon art.

Upon completion of his course, Westcott, one of the seven U.S. graduates from the school, received his diploma with "Grootste Onerschieding" (greatest distinction). Westcott is the only person in the history of the school to receive this highest rating.

In 1954 Westcott organized the Spartan Bellringers. Each year the 10-member group of undergraduates tours the country on a concert circuit. This year during spring break it traveled along the East coast concertizing in New York City, Pittsburgh, Philadelphia, Washington, D.C., and Baltimore.

One of the best groups in the field, MSU's bellringers are known across the nation and throughout the world. Last June they per-

Wendell Westcott at the keyboard of the Beaumont Tower Carillon. Photo by Russell Steffey

formed at the national convention of the American Handbell Ringers Guild in Washington, D.C.

The British Broadcasting Co. broadcast a tape of the Spartan Bellringers last December as part of a special Christmas program. After the broadcast BBC

officials contacted Westcott and asked him to make another tape which will be aired sometime in May. On this second tape Westcott explains the history and music of the handbells and conducts ringers who play Westcott's own arrangements of various compositions.

In 1957 Westcott introduced handbell ringing to the Netherlands via a Dutch national radio and television program. "Handbell ringing was unknown throughout Europe," said the

professor. "There were no local ringers in the Netherlands," he continued.

"I practiced with the ringers for about four months before our performance," recalled Westcott. "I spoke no Dutch and they spoke no English," he said. "We communicated in the musical language and by hand signals."

In 1950 Westcott started an eight-year campaign for the enlargement of the Beaumont Tower carillon from 23 to 47 bells. According to Westcott the enlargement occurred in three phases with the final installment being made in 1958.

Westcott presents weekday informal concerts fall through spring terms on weekdays from 7:50-8 a.m. and from 5-5:15 p.m. On Sundays he plays from 2-2:45 p.m.

Westcott has written several articles on campanological subjects that have appeared in several music magazines including "Music Journal" and "Music Educators Journal."

A collection of arrangements and compositions written by Westcott and published by J. Fischer and Bro. will soon be released. Presently the professor is writing a book on the history of bells and what goes into their making.

The book, presently titled "The Sound of Bells," will be published by G.P. Putnam and Son of New York and is expected to be on the stands by next fall.

## Isn't Agriculture

CHARLESTON, W. Va. (P) - State Agriculture Commissioner Gus Douglass said a nudist club tried to advertise its camp for sale in his agency's market bulletin.

Douglass said he had to turn them down "because nudists aren't bona fide farmers and we are supposed to serve only farmers."

## CLASSIC TO SWING

# Ring-a-ding-ding-ding-ding!

Since being organized in 1954, the MSU's Spartan Bellringers have achieved international fame as a result of tours throughout the country and television appearances. The group has also been heard via tape on the BBC.

The bellringers consist of 10 students who perform on English handbells. Their music ranges from classical and semi-classical to popular modern songs like "Misty" and "Malaguena."

Organized and still directed by Wendell Westcott, assistant professor of music, the Bellringers are the only university-sponsored bellringing groups in the country today.

Bellringing is a traditional English art that is more than 350 years old.

The handbells used by the Spartan Bellringers are manufactured by the famous Whitechapel Bell Foundry of England which also produced the Liberty Bell in Philadelphia and the bells in London's Big Ben.

During spring vacation the bellringers toured the eastern United States playing 21 concerts before capacity crowds in Cleveland, Philadelphia, New York, Baltimore and Washington.

The highlight of the trip was a performance in New York's Town Hall. A New York Times review of the concert praised the group's "clean execution, pure tone, modest demeanor and general musicality."

The bellringers also received an enthusiastic reception in Philadelphia where they performed for the Matinee Music Club, the largest in the country. The Philadelphia visit also included a performance on CBS television.

In June the bellringers will perform before a regional convention of handbell ringers at Kansas State University.

Because seven of this year's bellringers graduate in June and must be replaced, new members are being recruited this spring. Anyone interested with adequate musical reading ability should contact Wendell Westcott this term at the Music Dept.

**WHO TOLL THE BELLS-** (Left to right) Janet Prescott, Mt. Clemens sophomore; Jackie Dallas, Lennon sophomore; Wendell Westcott, director; Bruce Whitehead, Knoxville, Tenn., freshman; and Nancy Esterl, Skokie, Ill., sophomore practice their parts in a Spartan Bellringers number. Each player may use from four to 13 bells during a performance. The group uses a total of 49 of the English handbells. Photo by Russell Steffey

## Act Too Showy

MILWAUKEE, WIS. (UPI)--- Mrs. Susan G. Darcy, 21, and Jeffrey K. Hubbel, 20, University of Wisconsin students, were free on their own recognizance Sunday on charges of lewd and lascivious conduct at the Milwaukee Art Center.

Police said the two disrobed and took baths in beer coolers before 250 persons who paid \$1 each to witness a "happening" at the center a week ago.

## AT WOMEN'S INTRAMURAL

# Promenaders To Present Dance Show

The Promenaders, the University square dancing club, will swing out at 2 p.m. Sunday in the Women's Intramural Building with a flash of petticoats and the shuffle of soft-soled shoes in a Parent's Weekend demonstration.

Visitors watching the

Promenaders move through their whirling patterns are requested to wear soft-soled shoes.

The 16-member demonstration team entertaining Sunday performs in communities and high schools throughout Michigan through the University's Cap and Gown series.

In 1961 they were invited to dance at the National Square Dance Convention in Miami, Fla. They have appeared on television programs in Lansing, Detroit and Kalamazoo.

The heart of the club, however, is in the open-hearted fun the rest of the 55 members offer students, visitors and Promenaders alumni. They hold their meetings from 7-8:15 every Wednesday in 34 Women's IM. Guests are always welcome. They teach square, round and folk dancing to anyone who wants to learn.

On campus the Promenaders perform for Welcome Week, conduct dormitory complex dances, demonstrate for square dance classes, train callers and appear on the University television station.

This term the demonstration team has done a lot of traveling. It began April 1 with a trip sponsored by Cap and Gown to Grand Rapids to perform for Aquinas College's Carousal Program.

Every year the Promenaders bring in a nationally known caller. This year it was Dub Perry from Flint, who 'called' a dance held April 3 in Holt. April 15 found them traveling to Jonesville. April 16 they were in the Whirlaways in Grand Ledge.

On April 20 they taped a television broadcast for the Harvest Program on WMSB. April 22 they were invited to join the Dewitt Dudes and Dolls, a teenage square dance group.

And so the Promenaders dance on.

PROMENADERS--The MSU Promenaders will present a full-dress demonstration of dances at 2 p.m. Sunday as part of Parents' Weekend.

## 1916 Alums Set To Be 'Patriarchs'

Induction of the Class of 1916 into the MSU Patriarchs today will highlight this year's 38th Annual Patriarchs' Day, which traditionally brings together alumni who graduated 50 or more years ago.

President John A. Hannah and class officers will speak at a luncheon to officially welcome the class into the Patriarchs. The luncheon will be preceded by a special planetarium program and followed by guided bus tours of the campus.

A special dinner for the new Patriarchs will be held tonight at the Union. Many of the Patriarchs will then attend Water Carnival.

Alumni from six other classes will also be returning by invitation Saturday for Alumni Day. On the calendar for members of the classes of '21, '26, '31, '36, '41 and '51 will be the Spartan Invitational Golf Tournament, beginning at 8 a.m. at Forest Akers Golf Course.

The alumni will also be able to attend planetarium programs, class lunches at the Union, at which official pictures will be taken, the MSU vs. Notre Dame track meet at 1:30 p.m. at Ralph H. Young Field and Water Carnival.

Guided tours of the campus will be available for alumni. Special arrangements have been made for them to park in the ramp by Shaw Hall and special buses will transport them from Shaw Hall to the Union.

## Engineering Curriculum Broadened

The College of Engineering has taken another step to allow undergraduate engineers to gain broader training outside the professional fields of specialization.

The Academic Council has given approval to a curriculum pattern that provides study programs in the new "engineering sciences" such as computer science, systems science and materials science.

The new curriculum, available immediately to students reaching junior standing, allows undergraduates to study in areas not previously brought together in the professional engineering curricula.

In addition, students may combine their new fields with such outside areas as business management, medicine, social sciences and physical sciences.

The engineering college earlier reduced bachelor's degree requirements from 212 credits to 180 credits. Dean John D. Ryder said the credit cutback conforms to the view that pressures no longer exist to "justify heavier-than-normal course loads for engineering students." The credit reduction became effective in the fall of 1964.

Students in the new program will take a core program in basic mathematics, chemistry, physics, introductory computer programming and general education courses in the University College.
