SEEK TO PREDICT FOREST FIRE WEATHER

A summary of investigations made over a period of five years on the "Measurement and Interpretation of Forest Fire Weather in the Western Adirondacks" has just been published by the New York State College of Forestry at Syracuse, N. Y.

The bulletin is a co-operative work by the northeastern forest experiment station. United States department of agriculture and the New York State College of Forestry, to which the Empire State Forest Products association contributed a portion of the money necessary to carry on the work. Paul W. Stickel, associate silviculturist of the northeastern forest experiment station, is the author. The gathering of data upon which the bulletin is based was for the most part under his personal supervision.

The purpose of the bulletin is to accelerate, simplify and make more accurate the forecasting of forest fire conditions. In order to do this a study was made of changing moisture conditions in the forest floor. The results | Stark of the Treasury Department. were correlated with corresponding weather conditions so a criterion could be established. This is used as a sort of index and enables the weather forecaster or the forester to ascertain more accurately conditions of inflammability which may be expected in the forest at any time by simply consulting weather charts. Thus fire organizations will be able to anticipate the danger periods so the fire-fighting forces will be prepared to attack a fire without delay. This tends greatly to eliminate the possibility of surprise fires and any chance of the fire organization being taken unawares by a forest conflagration.

Inspectors Find Ionia

The semi-annual visit of the inspectors to the Ionia county jail found Sheriff William Franch fighting off an attack of influenza, but the jail is in clean and orderly condition. The records showed a marked diminution in number of inmates in the six-month period, as compared with the number for the six months preceding, 99 for the period just closed as against 193 for the previous half-year period. Character of offenses, also showed exceptional improvement.

When

TEETHING makes HIM FUSSY

One of the most important things you can do to make a teething baby comfortable is to see that little bowels do their work of carrying off waste matter promptly and regularly. For this nothing is better than Castoria, a pure vegetable preparation specially made for babies and children. Castoria acts so gently you can give it to young infants to relieve colic. Yet it is always effective, for older children, too. Remember, Castoria contains no harsh drugs, no narcotics—is absolutely harmless. When your baby is fretful with teething or a food upset, give a cleansing dose of Castoria. Be sure you get genuine Castoria with the name:

Resurrection

The Genuine "Rose of Jericho"

These peculiar plants are found among the pines and cedars of Palestine. When you get the plant it will have the appearance of a ball of tightly folded leaflets, dry and dead. Put it in water and it will open up its handsome fern-like foliage, turn green and begin to grow in about twenty minutes. Take it out of the water and it cui's up, turns brown and becomes dead again. It is capable of apparently dying and coming to life again repeatedly, and will keep in its dead or dormant state for years and reawaken directly upon being placed in water. It is an interesting, curious and most beautiful house plant with fine fern-like leaves of very agreeable fragrance. If you want a "table fern" that will prove satisfactory under all conditions, don't fail to get one of these marvels of plant life. Grows and thrives in a shallow bowl of water, and is greatly admired by everyone.

Secretary Mills Discusses Tax Increase With Legislators

Ogden L. Mills, newly appointed Secretary of the Treasury, is seen as he appeared before the House Ways and Means Committee. Left to right, seated, are B. H. Bartholew and A. W. Gregg of the Treasury Department; Under Secretary Ballantine and Secretary Mills; and standing, Representative Beaman, L. H. Parker and Dr. W. P.

CONDITIONS ABROAD HIT UNITED STATES AUTOMOTIVE EXPORIS

American automative exports in 1931 totaled only \$160,750,833, a 46 per cent decline, compared with the preceding year, according to figures made public by the Department of ${\tt Commerce.}$

The decline was considerably greater in percentage than the production Jail in Good Condition of passenger cars and trucks, production showing a decline of only 29 per cent. Imports of automotive products totaled \$1,234,402, this being a decline of but 33 per cent, also a considerably smaller figure than the expor: decline.

The department explained that unfavorable economic conditions were responsible for the American export decline, which amounted in dollar volume to \$137,901,215 from the figure total was also considerably under the 1922-1931, which was \$312,580,754.

"In spite of a 29 per cent drop in the output of passenger cars and trucks the export ratio to production was but 5.4 per cent, as against 7.1 per cent and 10 per cent, respectively, during 1930 and 1929," the depart-

"Compared with our shipments during 1930, the export valuation on passenger cars decreased by 53 per cent trucks by 55 per cent, and parts and accessories by 37 per cent."

Berkey-Gay Assets Listed

GIANT AZTEC BEAN

The above illustration was reproduced from an actual photograph, to show the comparative size of the Giant Aztec Bean with that of the common field or navy bean. LARGEST OF ALL BEANS

LARGEST OF ALL BEANS

It is a real bean; looks like a field or navy bean except that it is 8 or 9 tames as large. 18 or 20 Giant Aztec beans usually weigh an nunce, while it takes from 160 to 170 of the common field beans to weigh an ounce. It is a bush bean; will stand more drought than most varieties; very hardy and probably the most productive bean grown. One planter reports that two years ago he secured four beans, the product of which he replanted last spring, and in the fall harvested 240 pounds of dry beans. The quality of the Giant Aztec Bean is unexceiled both as a green and dry shell bean. Our supply of seed is limited, and the price is high, but now is the time to get started with this wonderful bean. 8 beans, 25c; 40 beans, \$1.00; nne-fourth lb., \$2.00, postpaid.

Portable Feed Mills To Pay Weight Tax

Portable feed and grist mills, mounted on trucks must pay a tax on the entire weight of the outfit as of \$298,652,048 iln 1930. The 1931 it is based upon highways before securing 1932 license plates, the Deyearly average for the 10-year period partment of State was informed in a recent opinion from the attorney general's department.

There are about 100 portable mills pperating in Michigan, according to departmental records, and several owners this year sought to class the mill equipment as "load" and pay a tax only upon the truck chassis. In computing weight taxes for these vehicles, the opinion of the state's legal department is being followed.

On Same Farm in Eaton Since 1839

Mrs. Rachel Lane, who lives about 11 miles southwest of Charlotte in Bellevue township, has lived 93 years

Horace Lane, and enjoys good health, joys attending some of the social functions in her neighborhood.

Revives Age Pensions

Old age pension sentiment is being organized throughout Michigan in the hope that sufficient pressure may be brought to bear on the next legislature to obtain a low on the subject. Meigs B. Russell, Michigan field secretary of the American Association for Old Age Security, is direction the work which is taking the form of local old age securitty committees. The 1931 legislature rejected several bills on the subject despite an organized campaign in their behalf waged by the Fraternal Order of Eagles.

"Eye" Operates Door

Another use has been found for the Electric Eye" or photo-electric cell Chrysler-Detroit Company employs an 'Electric Eye" to operate the fourfold door used for entrance and exit to its service department. It is claimed to be the only completely automatic ally operated door in the world.

C. S. Templeton, service manager developed the new door. An ordinary spotlight focused on an amplifier located directly opposite, operates the door from the inside. A motor car head lamp located on the turn at the bottom of the ramp focuses its ray of light on the "Electric Eye" situated on the floor outside the door. When the ray of light is obstructed by the passage of a car at either top or bottom the door opens. As soon as the ray is clear the light returns to its original position on the amplifier, closing the door.

It's a Secret Judge: "Your wife accuses you of terrorizing her."

ra Camp Site In State Purchased MICHIGAN PAROLE SYSTEM IS SCORED

was announced recently by the Na- trained probation officers throughout that corporation fees will exceed tional High School Orchestra Camp the state, with trained centralized early estimates. Last summer it was supervision of this function it is intirely possible that from two-fifths The purchase was made from Willis to one-half of our prisoners could be released to serve their sentences on to the state and the removal of reclaimable offenders from the corrupting influence of the prison," declared be guest conductors this year and that Professor Arthur Evans Wood, criminologist in the University of Michigan, in recommending a thorough

> Michigan supports one of the highest per capita prisoner rates in the country, Wood points out. The prisons are packed, and so large that the individual study and effort which must be made to reclaim offenders practically impossible.

"Jackson prison, with 6,000 in mates of whom little or nothing is known, is little short of monstrous and I say this despite the humane and efficient management of that institution," he says. All problems of discipline, labor, education and parole ead back to the necessity for classification, separation and differential treatment of various types of offenders, he states, and this calls for a central institution where every prisoner may be studied scientifically and then sent to a smaller institution or prison farm from where he will get the sort of influences which may reclaim him to society.

Parole and probation within the state need to be enlarged, scientifically staffed, and put on a civil service basis, Wood maintains.

Thousands of first offenders and other suitable cases, who would gain nothing but a hardening of criminal spent among habitual criminals, might mortgage bonds outstanding amount lage nearby. Mrs. Lane now lives with be allowed their liberty, be aided along the right paths by parole or probation officials who understand their special problems and incidentally save the state the cost of maintaining

> On the other hand, such scientific parole and probation control would restrict the release of bad risks, prevent ing the freedom of characters dangerous to society.

As a failure of the undermanned, scientifically unadvised parole or probation system. Wood points to the Washtenaw county "torch murderers," two of whom were convicted men out on parole, one from Michigan and one from a Missouri prison. Despite the fact that little was known of the real mental and emotional make-up of these men they were released on society without any adequate follow-up to check their behavior, and allowed to drift again into circumstances which led to a shocking tragedy.

Plan More Wells In Central Field

Of some 20 tests being drilled in the Isabella-Midland oil fields at the present time, several others the next few days are expected. The tests are being watched by development companies who are expected to determine future development plans on the basis of the results of several wildcat tests.

The Pure Oil Co., Bernard B. and Mason-Kidder tests are due to strike the Dundee oil sand within a few days. Both are in the east pool.

Frank I. Maire's wildcat test in Gilmore township, Isabella county, sec tion 12, three miles northwest of the Vernon oil and gas fields on the Wilson estate No. 1 was drilled into water in the Marshall formation, but will be pushed on to the Dundee. Hopes had been entertained that the test would open up a new gas pool from the Marshall sand.

Walter Lee McClanahan, leading developer of the field, at present has Prisoner: "Well, your honor—" six tests under way, two of which are Judge: "Stop! What I want to on the A. G. Struble farm, scene of a

Unemployment Hits Jackson Prisoners STATES TO STOP

Unemployment still is a problem at the Michigan state prison. Warden Harry H. Jackson recently announced that of the 5,750 inmates, approximately 2,775 are working regularly, 1,200 in institutional jobs, 1,000 in industries, 450 on construction at the new prison and 125 on farms. About 1.700 of the 3,000 unemployed are enrolled in the prison schools and the 1,300 men without jobs or pursuits are required to take daily exercise in the prison yards.

Work on Grand River Span at Ionia Rushed

Because of favorable weather conditions work on the new cement bridge to span Grand river on the site of the narrow iron bridge built 30 years ago, is being hurried, with 75 men working on the day shift and 15 at night. Three of the four steel sections have found their way to junk yards and the last one soon will follow.

Most of the pile driving is completed, some coffer dams have been built to keep out the water and some cement has been poured. The bridge will be 36 feet wide, with a 21/2-foot walk on the east side. It is expected the span will be completed before the contract date, October 4.

Corporation Fees Exceed Expectations

Statistics of the corporation divi-"If we had an adequate number of sion of the department of state show \$6,500,000 from corporation privilege fees. But at the present time \$6,800, 000 has been paid in and it is expect ed that \$100,000 more will be collectprobation with a prodigious saving ed before the end of the fiscal year.

Fees collected for incorporating new companies are slightly below last year's figure. During the present fiscal year franchise fees have totaled about \$105,000 to date, while for the corresponding period of 1931 overhauling of the Michigan penal the fees from this source amounted to system as a help toward crime reduc-\$120,000.

Marks Fiftieth Year In Employ of P. M.

This year marks the fiftieth anniversary of years of employment of William J. McAlary for the Pere Marquette Railway Co. and his retirement from active duties. McAlary was born in Ireland and came to this country at the age of 21. One month after his arrival he entered the employ of the then Detroit, Lansing & Northern as a laborer, soon was advanced to be a brakeman, then a steam fitter in the car shops at Ionia and in recent years stationary fireman and night-watch-

Eaton Rapids Debt Free

The city of Eaton Rapids is probably in as fine a financial condition as any small city in the state, the financial status at this time being absoluvely free from debt, with approximately \$22,500 cash in the treasury.

Mother's Favorite for Baby's Daily Bath Cuticura Soap Refreshing and Soothing Price 25c. Sample free. Address: "Cuticura," Dept. 13B, Malden, Mass.

A TAX EVASION

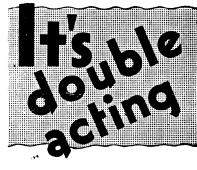

Without the nfes and drums or the prolonged noise that goes with liquor bootlegging another form of bootlegging has eaten its way into the public pocketbook. That is the bootlegging of gasoline which, claim the most conservative estimators, steals \$40,000,-000 yearly from highway funds, enough to build, at present low prices of labor and materials, some 1,500 or 2,000 miles of first class pavement.

That bootlegging of gasoline has existed for some little time has been known, but not until quite recently was it discovered that it has become so widespread that about one-fifteenth of all gasoline used in automobiles is sold in such a way that the prescribed gasoline taxes are not paid to the states.

Several states, when they became aware that many an unsuspecting motorist's dollar was making "successful" business men out of crooks, launched campaigns that have a twofold purpose, the placement of bootleggers behind the bars and of gasoline tax money in the proper receptacle, the state treasury.

Gasoline bootlegging, which is found in nearly every state regardless of the size of the gasoline tax rate, can be stopped and at a profit. In Illinois, for instance, the 1931 July-October collections were \$728,000 more than in 1930, even though less gasoline was sold. Further, 50 tax evaders have been indicted and more will be soon. Pennsylvania is also playing a winning hand. In September, 1931, that state collected onethird more gasoline tax money than in the same month in 1930. Pennsylvania has more than 600 gasoline tax evasion cases pending in the criminal

To curb gasoline tax evasion states must cooperate with each other, and reputable gasoline distributors and dealers must work together even to the extent of forming combative organizations. In some cases it will be necessary for states to tighten up laws. Fraudulent entries in books, the carting of untaxed gasoline across state, lines, the operation of dummy companies, all can be eliminated.

Warns Farms Beware 'Of 'Bargain' Seeds

Beware of advertisements and mail order solicitations for so-called bargain seeds is the warning of R. D. Lewis, farm crops specialist at the ly or not at all adapted.

POULTRY

HENS DO NOT BOTHER TO RAISE CHICKENS

Michigan poultry yards now contain one of the few leisure classes left in the world, since mechanical contrivances have relieved 80 per cent of Michigan hens from the responsibility of raising their own families, according to the poultry department at Michigan State College.

Successful artifical raising of chicks is dependent upon clean range, maintenance of the proper temperatures in the brooder house, and the proper amounts of suitable feeds.

Clean range means ground upon which no kind of poultry has run during the preceding two years. Brooder houses must be thoroughly cleaned and disinfected before the chicks are placed in them. The brooder house should be movable and should be taken to the range after it has been cleaned.

The brooder stove should be set upon an asbestos pad or in a sandoox to eliminate fire hazards. A temperature of 90 degrees at a point one inch above the floor at the outside edge of the hover should be maintained. More chicks are injured by overheating than by chilling. brooder house, away from the hover, should be about 70 degrees; these temperatures can be gradually reduced as the chicks become older.

The starting mash recommended by the Michigan State college poultry department is made up of 36 lbs. coarse ground yellow corn meal, 20 pounds flour middlings, 20 pounds ground oat groats or ground oatmeal, 10 lbs. dried milk, 5 lbs. meat scrap (50 per centiprotein), 2 pounds steamed bone meal, 1 lb. salt, and 1 lb. cod liver oil. This mash can be fed until the birds enter the laying house, but it is improved as a growing mash by substituting 20 lbs. of bran for the flour middlings. The dried milk can be cut to 5 pounds and the corn increased to 41 lbs.

DEMAND IMPROVES FOR SMALL TURKEY

The consuming public is demanding smaller turkeys, according to reports received by H. L. Shrader, federal poultry husbandman, from the leading markets of the nation.

Ten years ago, he said, consumers preferred large toms and the smaller birds, usually hens, brought lower provided by the secretary of agricul- tural Commissioner O. L. Dawson to prices, but now the market demand ture and at the same time will exe- the Foreign Agricultural Service of is for birds weighing an average of 10 pounds dressed. This year the and will give as security a first mort- omics. Dawson reports that only eight smaller turkeys have commanded a premium of 3 and 4 cents a pound, hrader said.

One of the largest chain-store buyers states that three-fourths of the demand in his stores was for birds weighing from 8 to 12 pounds.

Range Lands Grow High Grade Lambs

Lambs which will sell at top market prices at four to five months of age can be produced, without the use of grain supplements, on Michigan's grazing land if sufficient area is available and if the flock is kept healthy, department at Michigan State college.

This conclusion is based on a study of the methods used during the past year by Michigan shepherds who entered their flocks in the Wolverine Lamb Production contest.

Other lessons learned from the

Some alfalfa or other legume hay should be fed as part of the flock's winter ration and legume pastures should be used if they are available. For Long Service If legumes cannot be fed during the winter, the ewes should get some grain daily.

The breeding flock should be drenched once or twice before they eradicated by dipping the sheep. Several communities have built dipping vats which are used cooperatively. A pared by mixing 50 pounds salt, 50 pounds special steamed bone meal, and one ounce of potassium iodide. The use of the iodine preparation decreases the number of lambs affected by goiter.

Best Farm Policy in 1932 Is to Sit Tight

The best policy for farmers this year is to "sit tight," to neither ex-Ohio State university, who believes pand nor decrease their enterprises before such seeds are purchased is and to decrease production costs and the time to determine whether or not cash expenses as much as possible, in The capital stock has been fixed at they are true bargains or an expen- the opinion of Michgan State college Moltke, nephew of the general, who \$50,000 and each farmer is limited to sive disappointment. WORLD'S FAIR IN

Yes, the big World's Fair will be held in Chicago next year. And its going to mean that millions of people from all over the world will visit Chicago and these extra millions will all have to be fed. This will mean better prices for certain lines of farm produce right here locally.

Prepare for the better egg prices this big event is bound to bring by ordering your Larger Leghorn baby chicks today.

A Smile From the Proposed Canal Route in France.

(Prepared by National Geographic Society Washington, D. C.)—WNU Service. WO French cities, Bordeaux and

Carcassonne, the former a great port and the latter a sleepy ancient inland town, are literally in the way of the canal which France is planning to dig from the Atlantic ocean to the Mediterranean sea, thus affording a new waterway to the Mediterranean from the west.

Bordeaux will be the Atlantic terminus of the canal, which will include portions of the Garonne river and the Canal du Midi which was built in 1681. The canal will be about 280 miles long and will cost approximately \$160,000,-

Bordeaux is seldom in the headlines in peace times, but let Paris be threatened from the north or the east, and Bordeaux would doubtless resume its old place in the spotlight. During the Franco-Prussian war, when the enemy occupied Paris, and again during the early days of the World war, before the Germans had been stopped in their initial rush on the French capital, the machinery of government was hastily transferred to the great commercial city on the left bank of the Garonne. At the time of the French revolution, too, the Girondists used Bordeaux as their chief headquarters.

Geography is Bordeauxⁱ not only in time of war but in time of peace as well. Although a seaport, the city is 60 miles from open sea on a river that provides adequate dock ing facilities but is still not deep enough for warships of heavy draft. A few barges, judiciously sunk across the channel, would block everything else at any time desired. Far down in the southwestern part of France, the city has prospered almost undisturbed since it first came into prominence as the capital of Aquitania Secunda of the Romans.

Bordeaux, however, should not be regarded only as a governmental pinchhitter. It is a thriving commercial city, the fourth in population in France, and has a foreign trade exceed, among French ports, only by Marseilles and Havre. With the province of Burgundy, in the eastern part of France, the district around Bordeaux shares the wine-producing honors of the country.

The Yanks Remember Bordeaux.

Bordeaux is largely terra incognita to the average tourist. None of the large transatlantic lines from North America terminates here, although there are many smaller companies, especially those connecting France with South America. Nor is it on any heavily traveled route to other parts of Europe. Bordeaux cannot benefit by way-traffic, as can Marseilles, Nice or Lyons. Travelers to Spain and to the shore resorts around Biarritz generally pass through the city without stopping.

The American doughboy, however, knows Bordeaux. When the United States went into the World war the railroads in the northern part of France were greatly overworked and choked with traffic. The northern ports, too, were menaced by the submarine. The Brest southward conditions were better. Brest, St. Nazaire. Nantes, Bordeaux and Bayonne thus spring suddenly into front-page headlines of American newspapers.

Docking facilities, even at Bordeaux. were rather poor at that time. It was necessary for American engineers virtually to reconstruct some of the ports. In the spring of 1917 only two large ships could berth for unloading at the same time in Bordeaux, but a year later there were places for fifteen vessels. Bassen, a small village six miles down the Garonne from Bordeaux, was given fine docks and warehouses. A great deal of the supplies and ammunition of the A. E. F. were landed here. Bordeaux was one of the few

cities to benefit by the war. Commercial but Attractive.

Despite the fact that it is largely a commercial city, Bordeaux is, in many respects, very attractive. The main part of the city curves around the left bank of the Garonne river, which at this point describes a wide semicircle. Low white houses take the place of the tenements so characteristic of other French cities, while the public buildings are grouped in the center of the city along public gardens or line the imposing quays of the waterfront. The whole city is surrounded by a circle of boulevards.

The Cathedral of St. Andre, started in the Eleventh century, is considered one of the best proportioned Gothic churches in southern France. The Pont de Bordeaux, one of the bridges connecting the city with the right bank of the Garonne, was long considered among the finest in the world. Many of the magnificent private homes of the city were built when the great merchants of Bordeaux were at the height of their wealth and power, and are comparatively modern.

Around Bordeaux are smiling hills and fresh valleys, covered with vineyards. The vines they produce have made the district famous and have sent the names of Medoc, Graves, Sauternes, St. Emilion, etc., around the world. Nearby also is the little town of Cognac, which has lent its name to the most potent of French liquids. It is the center of the brandy trade of the district. South of Bordeaux stretch great pine forests and regions of waving grass, like those of our southern Atlantic states.

Carcassonne Is Two Towns.

Carcassonne straddles the River Aude about 56 miles southeast of Toulouse. Travelers arriving at the railway station in the so-called new town on the west bank of the Aude scan the panorama for a city of antiques, but it is not found on that side of the

The new town is only about three hundred years older than early American towns. Some of the inhabitants of the old town across the river revolted against the king of France and were driven out of the old town walls. They were allowed to settle on the site of the new town. That was in-1247.

A beautiful, shaded parkway near the railroad station introduces Carcassonne, but a few steps beyond the traveler is hemmed in between walls of stone and brick buildings rising sheer from the sidewalks. The streets run at right angles, forming solid blocks, the monotony of which is relieved only by a few squares and small parks and a wide, shaded boulevard.

The Place Carnot is a combined market place, loafing place, and meeting place in Carcassonne.

Famous Walls of the Old City.

Cross the River Aude, enter the gates of the old town, and you are on a site which was occupied by a settlement somewhere back in the mists of history. You may cross the Aude by a modern bridge or, with the ancient rampants ahead of you, you

might prefer the old Thirteenth century span. The frowning gray walls of the old town were impregnable when battering rams were the "high explosives" of attackers. There are two walls with about 28 feet between them. One glance at these rampants convinces the traveler that one historian was right when he said that only famine or treason within the walls could cause the capture of the

The walls form an irregular oval about the old town and have only four openings. One opening in each wall is large enough to admit horses and wheeled vehicles, and each is guarded by a series of turrets and towers. The other openings are mere holes in the walls, wide enough for only one man to squeeze through.

Inside, narrow, cobbled streets breathe an atmosphere of many centuries ago. There is the venerable St. Nazaire Cathedral with stained-glass windows depicting Bible scenes, and the Chateau, where high walls once echoed with the gay revelry of Carcassonne feudal lords. These old structures look down upon streets almost deserted, for the life of Carcassonne today is in the new town where the wine trade, one of the old trades of the city, still flourishes.

POTPOURRI

Equal Days and Nights

The equinox, or that time when the sun passes across the equa tor at one of the equinoctial points, occurs twice yearly. The spring, or vernol equinox occurs March 21, and the autumnal equinox occurs September 22. At these times day and night are equal all over the world. Storms often accompany these days. (©, 1932, Western Newspaper Union.)

Honored for Valor

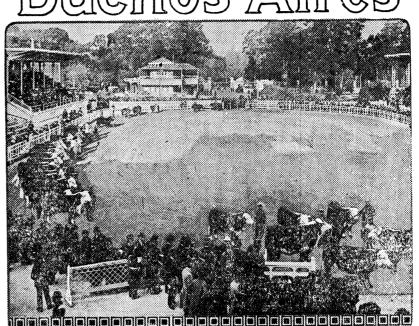

The Cheney award, consisting of a plaque, a certificate of award and a substantial cash contribution, was awarded to Private John B. Smith of the United States army air corps. The award, made annually to the officer or enlisted man of this branch of service performing the outstanding act of valor during the year, was made to Private Smith who, when a plane crashed into the building in which he was working, dived head first into the blazing cockpit and liberated the pilot's foot which was firmly wedged in the rudder bar. Smith, though injured by the crash, then removed the unconscious pilot to a place of safety.

Skater From England

Miss Megan Olwen Taylor, eleven years old, who, despite her tender age, is the British figure skating champion and who will endeavor to annex the Olympic crown in this division in the 1932 winter Olympics at Lake Placid,

DUEMOS.

Annual Cattle Show of Buenos Aires.

(Prepared by National Geographic Society, Washington, D. C.)—WNU Service.

THE world's largest market is planned for a five-block tract in Buenos Aires, Argentina, The market will have access to all railroads entering the city and also direct communication, by tunnel, with the city's port.

No city in the United States is so important to us as Buenos Aires is to Argentina. It handles four-fifths of all Argentina's trade, and houses 20 per cent of all the nation's 10,000,-000 inhabitants. All its 2,000,000 people are either Europeans or of European descent. This is true of only one other Latin American city-Monte-

Three times as big as Spain's largest city, modern Buenos Aires--as expanded and rebuilt in the last 30 years is conspicuous in all the world for its magic growth.

The whole 25,000-mile railway system of Argentina has its focus herethe finest railroads in South America. No great motor highways radiate from the city, because the vast pampas afford no road-making materials. But by rail and river Buenos Aires handles more than half as much freight as the port of New York, and the net tonnage of ships calling each year is equal to all that passes through the Panama canal.

Not trade alone makes it great. Its social, artistic and political attractions rank it among the world's most dazzling capitals. To it flock the rich, the influential, the intelligentsia of all Argentina. "Our country as a whole would develop faster," said one prominent banker, "if more of our best brains would stay in the prov-

Stock Farms' Are Enormous.

Yet, although so many land owners live in the city, the swift, prodigious growth of herds and farming on the vast campos is an economic phenomena in this comparatively new country. In Europe the Argentine visitor is noted among hotels, resorts and shopkeepers for the freedom with which he spends money. These immense incomes are mostly from the soil.

One Estancia in Santa Fe province runs 50.000 cattle, and boasts of prize bulls costing \$10,000 each and upwards. There are 25,000 hogs, 1,200 horses, a creamery making 4,000 pounds of butter daily for export to England: a private telephone system, a rambling chalet set in an artificial forest of imported trees, swimming pools, tennis courts—a princely estate that would make even a Texas cattle king dumb with astonishment. Similar ranches lie near Buenos Aires; others are far away, on the pampas, Their number, size, and money-making organization amazes the touristwith school-book memories of woodcuts showing a hard-riding gaucho swinging a three-balled lasso over his head and chasing a longhorn steeror an ostrich.

Nature is kind to Buenos Aires. Up the Parana are the majestic falls of Iguazu, and Guayra, solemn and stupendous, ranking with Niagara and Victoria in Africa. Up the Andes and under the shadow of Aconcaguahighest mountain in the Western world—runs a cogwheel railway that lifts you in a few hours from green plains to Alpine heights and snowdrifts 20 feet deep, where Argentine soldiers train on skis. Winter hotels are here now-a new St. Moritz. And there is ancient Cordoba, historic Tucuman, the famous baths of Rosario.

And as melons and oranges rush to our East from California and Florida. so Argentina's fruits flow into Buenos Aires. It lives well. Whole trainloads of fresh grapes come from the famed vineyards of Mendoza—and many reach our own markets. New York is at one end. Buenos Aires at the other, of a busy trade route. Now both sea and sky ships serve it. And ships are "ceaseless shuttles weaving the

fabric of international commerce and good will.'

American Investments Heavy. Mutual trade has brought huge American investments to Buenos Aires, notably in packing houses, public utilities and banks. Two Yankee concerns alone control more than 100 light and power units in Argentina. Here, too, you see the new policy of great American corporations applied, by which now their Argentine employees are encouraged to become

stockholders. Youth, vitality, sheer enjoyment of living, they are the attributes of Buenos Aires. Shiny new motor cars; fascinating, Paris-like shop windows; are lights glaring on well-dressed midnight crowds in brilliant Calle Florida; cafes, casinos, high-priced restaurants and hotels, all packed with chattering, laughing people. Endless places of amusement, including the great Grecian Colon theater; and, on billboards, many names familiar to Broadway: Titta Schipa, Chaliapin, Spinelli, Mistinguette. Parlantes," they call the "talkies."

And still it grows. Here lands the immigrant stream. Bearded men in boots, carrying bundles; wondering boys and girls, chattering in strange Slav or Latin tongues; bewildered mothers, their heads wrapped in shawls, hard-handed women bent from work, carrying babies and still more bundles-you see them all come slowly down gangplanks from European ships to stand a bit on the busy wharf and stare at Buenos Aires.

Argentina needs these. She has one-third as much land as the United States; but only as many people as live in and about New York city. Or about one and one-third per square mile, as against 490 in the British

Italians, English, Spanish, French, Germans, Swiss, American, all mingle. So cosmopolitan is the city that its great papers-La Nacion and La Prensa-must serve news from everywhere. Their circulation is enormous; their advertising huge. The quality, completeness and accuracy of what they print challenges the thought of every visiting journalist. Their absorbing Sunday rotogravures, their feature articles on sport, travel, international affairs, science, literature and art-many by world famous writers-astonish the newcomer, at first. Then he reflects; this is a great world city. It thinks like any other; and acts as Paris does, or Berlin, or New

Modern but Exotic.

Italian workmen with power drills tear up good pavements. New buildings rise higher and higher. Air students stunt at Palomar field, and Yankee free-lance flyers come peddling new planes. A man in fancy gaucho dress, as obsolete now as old time wild west cowboy gear, coils a live snake about his neck and hawks patent medicines. A communist tries to harangue a crowd, and police lead him amiably away. Children ride tame llamas in the parks. A weazened little man struggles through traffic with a huge basket of coconuts, and offers them to a world which seems to spurn coconuts.

Around the great Diagonal of the financial center grim, towering banks suggest Wall Street. Subways, long suburban trains, screaming newsboys, 50,000 football fans jammed before a loudspeaker on Avenida de Mayoyou see this a city-greatest in South America.

Its fog suggests San Francisco. Its flat expanse is like Chicago. The vast plains beyond, with endless leagues of corn, wheat and cattle, conjure up Kansas, or the Illinois prairies. And mules! Fat, with good harness, they compete with trucks. You see a team draw aside, to let a luxurious motor lorry pass hauling glistening race horses out to the track of the Tiajuana-like Jockey club. An

unusual organization this is. Its downtown club-house, gorgeous as a senate chamber, dominates all others.

A member may ask you to hunt partridges at a great estancia on the pampas. For many interesting hours a train hauls you past queer big corncribs shaped like tanks; wind mills; high-wheeled pampa wagons; endless riders in flat black hats, baggy breeches, short boots, flying ponchos, riding with short stirrups on clumsy saddles covered with sheep's wool.

Leagues of wire fence stretch far as the eye can see, and artificial groves of imported trees dot the pampas. You stop at a lonely prairie station-for all the world like Kansas west of Dodge City-where you are to hunt. Partridge are plentiful; so are ostriches.

Riding back to Buenos Aires you take the day coach, to hear cowmen talk. It is like riding, in old days, in the caboose of a cattle train from Texas up to Kansas City. Everybody talks herds, horses, fodder, calves, branding and market prices. Mention hunting. "Our boys never waste a cartridge on a partridge," says a cowman. "They use a horse-hair noose on the end of a pole-they just ride the bird down and loop that over his neck. And, anyway roasted armadillo is better than partridge-not so dry."

*********************** Suckling Pigs Pay

for Girls' Beauty Copenhagen.—A Danish girl had a hair shingle at the barber's and paid for it with one

suckling pig. Another girl gave four pigs for a permanent wave. It was a symptom of the increasing system of trade by barcreasing system of trade by barter because of the agricultural crisis. The girls, working on farms, are paid in live stock or farm produce instead of money.

RATS ARE USED TO STUDY TOOTH DECAY

Find Soundness of Dentition Depends on Diet.

Baltimore. - Two Johns Hopkins university scientists have made public discoveries that go far toward explaining the ways in which diet causes, or prevents, decay of teeth. Two fertilizers, phosphorus and calcium, regulated by vitamin D are the tooth

The experiments showing how to work the combination of the three substances were explained in Science, official organ of the American Association for the Advancement of Science, by Dr. E. V. McCollum and Henry Klein. Their work was aided by grants from the American Dental association.

The tests were made on rats. In the laboratories their caretakers grew tooth cavities in the rodents almost at will, or prevented them almost entirely.

All this was done simply by giving the rats the right proportions of phosphorus and calcium. This correct ratio was about four parts of phosphorus to three of calcium. Proportions of three to two did not work.

Not only the ratio was important but the amount also. There was a minimum of the fertilizers below which they failed of effectiveness. When the rats were fed too little and in wrong proportions, the report states that 80 per cent of them developed cavities in 140 days. With properly balanced diet this decay was cut to 5 per cent.

The investigators further ascertained that the portion of the phosphorus in the blood is of vital importance, and that this is related to-

vitamin D.

Calcium and phosphorus are two of the principal fertilizers. They reach man daily in many different kinds of food, but their proportions vary greatly. Vitamin D comes both from eating food and from sunshine or ultra-violet light on the skin.

Toll of Tuberculosis Drops to All-Time Low

Washington.-American health authorities have reduced the tuberculosis death rate to the lowest ever recorded, Surgeon Gen. H. S. Cum-

ming declared in a report to congress. The general health of the people of the country during 1930 and the first half of 1931 was "exceptionally good," Doctor Cumming said.

The tuberculosis death rate last year was only 68.5 deaths to every 100,000 population, as compared with 73.1 in 1929 and 76.4 in 1928. In 1900 the death rate from this disease was 201.9. This represents a saving of 160,000 lives.

In contrast to other diseases, infantile paralysis was more prevalent in 1930, but decimed in 1931.

Typhoid fever and diphtheria deaths

Pellagra, caused by poor nutrition, increased in 1931.

``````````` Ellen Meets Peggy's * Brother

Ey RUTH ARNOLD

ELLEN BURKE, sitting in her chair in the pullman as the long train drew into the station at Philadelphia, tucked Peggy O'Connell's letter safely in her handbag. Ellen and Peggy had met on shipboard going to Europe a few months before with their respective parents, and had formed an enthusiastic friendship. This was helped along because Mr. and Mrs. Burke and Mr. and Mrs. O'Connell found each other congenial.

On the way home-for the Burkes and O'Connells had purposely returned to America by the same ship-Peggy had exacted a promise from Ellen to visit her as soon as she had unpacked her trunks. Ellen lived in a New York apartment. Peggy lived in a country house outside Philadelphia. And the two girls planned many good times in exchanged visits.

"As soon as you reach Broad street station," Peggy had written, "you telephone my brother John." And then she had given his telephone number and his office address. "He'll be expecting you, and will pick you up at the station and bring you out home in his car. As I've told you, I'm sure you and he are going to be crazy about

Ellen had heard much from Peggy. in their many talks together that summer, about her brother John. And it must be admitted that part of her excitement at again seeing Peggy was that she would meet this paragon of a brother.

Ellen knew something of Philadelphia. And when there was some delay in getting John's office telephone, she realized that she was only a few steps from his office.

"I'll just pop around and wait there," she thought. "It will save him trouble, and I'm early. I'd rather wait there than here."

So, carrying her small suitcase and matching hat box, Ellen walked the square or two to John O'Connell's office. She hesitatingly opened the door labeled "John O'Connell, lawyer," then she entered the small waiting room. The room was full of girls, girls about her own age, girls younger and girls a good deal older.

"I'll just wait here until Mr. O'Con nell is free," she said to an office boy. who grinned in answer.

Ellen wore, of course, sheer, light silk stockings. She wore gray suede shoes, trimmed with bands of snakeskin. Her hat was of soft gray velvet, that was lovely above her fair hair and blue eyes. Her frock was of gray crepe de chine.

Just as she had taken, in all her surroundings a door marked private opened, and a homely, thirty-year-old woman, dressed in blue serge, serviceable and plain, emerged.

Behind her came a young man. Ellen's heart skipped a beat. It was John—she knew from a photograph

Peggy always carried with her. "You can all go now," he said to the other waiting girls. "The position

The other girls went out of the room. Ellen flushed and half smiled

"What are you waiting for?" he asked crisply. "Here, come in here a minute."

"But," stammered Ellen, "I'm-" She followed him into his office.

"I know. I know. But the job is filled. And just for your own good, let me tell you vou'll never get the kind of job a nice girl like you wants if you dress in duds like those. Did you see that girl I hired? Plain and reliable. The kind of a woman a man likes to have around all day. Not ugly, but just not noticeable and sure to have her mind on something besides clothes. Now you-anybody'd know you were thinking more about your looks than your work-and that doesn't do in an office."

"Don't feel offended," said the young man. "I'm just trying to give " of advice."

"But you're so stupid," said Ellen, as the door marked "Private" closed. And she picked up her two pretty little gray bags and walked back to the station. There she boarded the next local train to Peggy's home and explained to Peggy, when she got there that she hadn't been able to get her brother on the telephone. So Peggy promptly telephoned her brother not

When Ellen and John met that eve ning. John's eyes were openly admiring. Ellen, in pink tulle, with bare arms and no hat, did not at first recall the vision of gray that had disturbed his office that afternoon.

It was not until the next day when she and Peggy had luncheon with him at a hotel that he recognized the again gray Ellen as his office visitor.

"Well, by jove," he said in the middle of a mouthful of grapefruit, and he flushed and stammered more than Ellen had done the day before. "Whywhat must you have thought?"

Ellen, by this time was sure that John was all that Peggv had claimed for him-and more-smiled shyly.

"Well, what I thought then-doesn't matter-any more than what you did. does it?"

And then they both laughed and told Peggy the joke. And all three knew, though they said nothing of the knowledge, that Ellen and John would laugh all their lives together over their first meeting.

AMBULANCE SERVICE Day or Night

C. L. ANDRE FUNERAL DIRECTOR **Gobles**

Flower Orders

Historic Flag

The "Bonnie Blue Flag" was a flag of the South. It had a white field with a magnolia tree in the center, a blue canton on which was depicted a star, and finished with a red border and fringe. It is said that the display of this flag in the hall on the night the vote on the secession ordinance was taken in Mississippi inspired Harry McCarthy, an Irish comedian, to write the song of the same name.

Hedgehog of the Sea

A sea hedgehog, also called globe fish, is largely a tropical fish. It gets its name from its ability to inflate its stomach with air or water. When it does this its spines, with which the fish is provided instead of scales, protrude, forming an adequate defensive armor. Fish blown out in this way turn over and float, driving before the wind and waves.

Historic Book Plates

Book plates are ancient. Some of the small tablets found in Assyrian libraries must have been book plates. Japan had them in the Tenth century. Modern book plates are nearly contemporaneous with printing. The earliest actually known is a hand-colored heraldic wood cut of about 1480.

Early Weather Records

The first weather records in America, so far as known, were kept by Rev. Johann Campanius, who recorded the weather each day in the colony of New Sweden, near the present site of Wilmington, Del., for the years 1644 and 1645.

Parisian Life Changing

Paris is said to be becoming a city of suburbs instead of a haven for cosmopolitans, latest estimates showing that every week day nearly 1,900,000 persons travel to and from the city on 2,122 trains and thousands on street

Country Well Named

Not more than one-fourth of Iceland is inhabitable. The rest of the country is composed of elevated deserts, lava streams and glaciers. It was for this reason, undoubtedly, that the land was called Iceland.

Old Salutation

The origin of the salutation, "How do you do?" is not known definitely. Murray's dictionary indicates that an older form of this expression was "How do you?" This authority traces the inquiry back to 1563.

Can't Stop Yeast Working

The bureau of chemistry says that there is nothing that will destroy yeast in a liquid entirely except boiling. A low temperature will keep the yeast from acting as rapidly, but will not stop it altogether.

Postal Cards "Caught On"

When postal cards made their appearance in England about 60 years ago, people were so eager to purchase them that small riots took place in the post offices, nearly 1,000,000 being sold the first week.

Costly War Weapon

The Navy department says that it costs the government approximately \$8,000, depending upon the type of torpedo, to discharge a torpedo-that is, if it is not recovered.

Colonial "Game Law"

What may be said to be the first game law was one passed in 1623 by the Plymouth colony, declaring all hunting and fishing to be free, except on private property.

Yes, More Than That

A bee can rise with three times its own weight, says an insectologist. Yes, and sit down with about 300 times its own weight.-Thomaston

Franklin's Philosophy

Reduced to a few words, Benjamin Franklin's philosophy seems to have been embodied in the two terms, common sense and good-natured optimism.

Physical Culture Idea

Skipping rope with a ball suspended from the center of the rope is an exercise at German schools of physical culture to develop agility.

Reindeer Made Useful

Four hundred thousand reindeer have been killed in Alaska for food and clothing, principally for the Eskimos.

Evil in Deforestation

China's great floods are due in part to the fact that so much of the land has so little protective vegetation.

Rapid Growth

A mushroomlike fungus found in Hawaii is said to be the fastest growing plant in the world, its stalk reaching in one minute's time a height of several inches.

My bling reporter, "now what am I instructions were merely to keep him

under general observation." "Well, Pollard, it's no use crying over spilt milk," replied Eir Edric. only newspaper man out of a job?" The man's dead and that's that. The only thing we can do now is to try to find out how he died. But I don't A school teacher in instructing her quite understand how he managed to

> "I can tell you that, sir," said Polknow that we were watching him, and he was pretty careful what he did. He the steps themselves. It's easier to get he did a bit of cobbling when he had no other business on foot. When he "Still, it is wasn't there, he spent his time in the had a rendezvous, he could have been bar of the Margate Jetty. I had a man in both places, of course, and the Edric. "It seems to me, Pollard, that, landlord of the Margate Jetty is in as you suspected, Herridge knew he with us, thought I wouldn't like that was being watched, and determined to to go any further, sir. I didn't know it myself, until he told me that he was a friend of Inspector Brooks."

Sir Edric nodded. "A very useful ally, I should imagine," he remarked. "Very useful indeed, sir," replied Pollard. "Now, I'm pretty sure that neither in his own house nor at the Margate Jetty did Herridge hold any sort of a confidential conversation with anybody. At the Jett, he would just have a drink or two with the regular customers, but nothing more. He was as cunning as a basket of monkeys, and he wouldn't say a word that was likely to give himself or his pals away."

CHAPTER XXII

"On Saturday Herridge stayed at home until about four o'clock and then "He used to be a chiropodist, now he went out and walked down to the Jetty. Of course, sir, the place wasn't open, not offifficially, that is. But the house has a side door, opening upon Intense Young Thing: "In my fam- a narrow passage that leads down to some steps. The landlord isn't above letting chaps in at the side door during closing hours, if he knows them

ing of your financial status, nor do I him, without giving away the fact that nected with the theft of the diathat I am in a position to provide my himself with waiting for him to come "It's awfully good of you to take But when ten o'clock came there was to identify him and bring it home to quiries of the landlord, he found that he hadn't been inside the place that made one of these Wapping crooks evening. Instead of reporting to me admit something that will put me on that he had lost touch with his man, his track, sir,' 'said Pollard doggedly. he spent the rest of the night scouring

ditional defiance, as they addressed

CHAPTER XXIII

Sir Edric smiled. "It occurs to me

"Dashed if I can see that!" exclaimed Dick. "It was pitch dark in that room except for the one flash I told you of, and I refuse to believe that he recognized me by that. How could my distinguished features be known to the Funny Toff? Again, I am certain that I was never followed between my rooms and Walworth."

"The significance of that flash seems to have been lost upon you," replied Sir Edric. "You don't suppose that a man like the Funny Toff would engage an unknown agent without taking steps to find out who he was, do you? I haven't a doubt that you were standing opposite a hidden camera, and that he took a flashlight photograph of you. That photograph was circulated among his agents, one of whom recognized you. You are a fairly well known figure on race courses, at night clubs, and places like that, you know, Dick." "Good lord, I never thought of

that!" exclaimed Dick, in some dismay. "But I have," replied Sir Edric earnestly. "You're in this business now, Dick, whether you like it or not. And, since you're in it, I want you to help us. Not by indulging in any sleuth stunts of your own, but by helping me with your intelligence. It's brain power we want, if we are to circumvent the Funny Toff."

"If my brain is of any use, it is very willingly at your disposal," replied Dick. "But I confess, though I have thought a lot about this business, I'm

thought a lot about this business, I'm no further forward than I was. I suppose that your people have had a look at that house in Creek Street?"

"We have been over every inch of it with a magnifying glass," replied Sir Edric. "It has been condemned by the sanitary authorities and has been empty a long time. By the look of it, it seems to have served the youthful population of Wapping as a long function of the look of it, it seems to have served the youthful population of Wapping as a long function of long time. spoke to me in the Margate Jetty was an abvious bargee. But, if you come to think of it, Herridge cannot have Dick walked in, immaculately been taken from Wapping to Coldharbour Point in an ordinary barge When was he last seen alive?

"At about four o'clock," said Sir Erdic. "But I don't quite follow-"Wait a bit," interrupted Dick.

'Suppose he left Wapping by water for Coldharbour Point at four. Your barge was seen alongside the wharf about high water, say five o'clock. Now, the distance by river from Wapping to Coldharbour Point is about twelve knots. That means to say that if your barge conveyed him, she must have made twelve knots against the tide, which, as Euclid says, is absurd.' "One to you, Dick," remarked Sir

Edric. "I hadn't thought of that." "I haven't finished, yet. See what it is to enlist a brain! Who told your people about the barge, Conway?" "The warden of Rainham ranges,"

replied Sir Edric. "They lie a little farther down the river from the wharf." "Then he saw her from the shore. To be exact, he didnt' see the barge

at all. Her hull would be hidden by the sea-wall. He could only have seen her masts and sails." "A sufficient reason for assuming

the presence of the hull, even to a stickler for exactitude like you, Dick," replied Sir Edric dryly.

"Oh, I haven't a doubt that the barge was there all right. My point is that if a boat had come alongside one of their accomplices to offer to "It's a devilish difficult thing that her, the range warden would not have seen it. I believe that Herridge was brought from Wapping to the barge in a boat. Now, only a fast motorboat could have made twelve knots against the tide.

WOMAN ISSUES RULES OF IDEAL HOME LIFE

"Thou shalt make beautiful, keep clean and in order thy home' is the greatest of the "Ten Homemaking Commandments,' according to Miss Myrtle Weldon, state home demonstration leader of Kentucky, main speaker at the home economics extension banquet held recently in connection with the homemakers' division of Farmers' Week at Michigan State college, Feb. 1 to 5.

Second of the commandments should be "Eight hours a day shalt thou labor and do all thy housework and the other eight of thy waking hours thou shalt attend to thy homemaking,' 'explains Miss Weldon, who follows this with "Thou shalt not slump on thy job," as the third of the commandments.

In the fourth, Miss Weldon advises every housewife to "take a short vacation from thy household tasks." This in order to better live up to the next commandment, "Thou shalt guard thy health and the health of thy family with all thy might."

The sixth and seventh "laws" as thyself mentally alert" and "Thou number of lectures. shart at all times hold thyself in readiness to answer the call of thy family for friendship and companionship," as is also the eighth, "Thou shalt cultivate and encourage in thyself and in thy family a sense of humor and the ability to play."

The next to the last is one which is being found of increasing importance in the feminine world of tocommandment is "Thou shalt not forget thy community."

Samples of literature together with full explanations and plans for teaching bird study will be sent to any teacher or other leader of children's groups upon receipt of request sent to National Association of Audobon Societies, 1775 Broadway, New York City. This material is supplied teachers and leaders of children's groups at 10 cents a set.

Dowagiac Student Trisects an Angle

Mason Myers, Central high school student at Dowagiac, apparently has "accomplished the impossible" by seeming to have proved his theory that it is possible to trisect an angle. With the instruments at the high school, Mason accurately trisected the angle, but geometrical propositions prove the meat to be "impossible." The report of the success of his experiments has aroused widespread in-

Greene: "The doctor says there's something the matter with my head."

Black: "You don't mean to say you paid a doctor to tell you that?'

By Frank K. Glew

There must be something in this life, That builds the soul of man; There must resound a note divine, That helps our daily plan; Because the striving life we know, Rewards men silently, Through deeds accomplished day by day Performed unselfishly.

There must be something in this life, That brings a rare content; That has no earthly bearing The dollar and the cent. It's quiet ways of helping, Cheering others as you go; It's the smiling soul that conquers GIVING OTHER SOULS A TOW!

Sunday Nights Offer Opportunities for Informal Entertaining

Sunday nights is the one occasion when the woman who lives in a small apartment can play hostess just as charmingly as the woman with a larger home and servants. The informality of the meal makes it all the more delightful. This is a grand time to give the men a chance to show their ability to cook. Find whose family is making its home in dients on hand.

Set the table as you would for a

an ever popular and appropriate dish. and I am anxious to do whatever I teacher if I were you. Cold roast lamb, pork tenderloin, can to help him. He is not exactly supper. LEED FOR BETTER PLANES IS URGED

mprovement in Efficiency of Aircraft Is Asked by the Advisory Board.

Washington.-A call for improveent in the performance and efficiency American military, naval, and vilian aircraft was sounded by offials of the national advisory comittee for aeronautics and heads of my and navy aviation activities.

In summarizing its investigations iring the last year, the advisory comittee asserted that the fundamental oblems confronting aviation in all s branches will not be solved until rcraft are made safer, more economal, easier to control at low speeds, d more efficient. In private aircraft, states, the airplane must be given eater safety and greater economy production, in maintenance and oprating costs if the aircraft industry to thrive in the face of threatened creasing military purchases.

Speed Crowns Lost.

Officials in charge of the bureau of ronautics and the army air corps ate in their annual reports that hile progress has been registered in phases of military performance, e speed crowns lost to Great Britn, France, and Italy will never be gained until more money is expendon experimental research on racing anes in this country. Both urged penditure of increased funds to ost the speeds of all types of fightg aircraft.

To stimulate depressed conditions in e aircraft industry in the interests national defense army and navy heads have recommended increased irchases of airplanes for the army nd navy. The advisory committee kes the position that nothing would ve such a beneficial effect upon e stability of the aircraft industry "assurances of continuity of govnment procurement of military and val aircraft."

Would Add 1,500 Planes.

Adoption of the programs recomended by Rear Admiral William A. offett, chief of the bureau of aeroutics, and Maj. Gen. James E. echet, recently head of the army air orps, would add from 1,000 to 1,500 anes to the national defense estabshment during the next five years addition to annual replacements nounting to between 800 and 900 anes. The increases for the navy ould be utilized affoat as the carers and flying deck cruisers allowed is country by the London treaty ere built. The army planes were reested by Maj. Gen. Fechet for aerial astal defense work, a mission asgned the army by the joint army and avy board this last year.

tudent Unable to Sell Gold That He Panned

Toronto, Ont .- A University of Toonto student is "broke" with \$20 in old in his pocket.

The student spent the summer paning gold in the Yukon. He sold part his earnings in the north country, nd brought more than an ounce back.

Now he can't dispose of his ounce gold. The banks won't accept it, ne jewelry stores said the amount vas "too small to bother with" and ne refineries agreed.

"It's a funny situation when you an't sell gold," he said, "but maybe 's the gold standard."

Place for Lime

Lime is not needed for such cuitiated crops as corn, tobacco, cotton, otatoes, and sorghum but it is used nainly for the clovers and alfalfa and, enerally, increases the yield of peas n beans. However, a great deal of ottomiand seems to have enough lime it. This is more likely to be true of ew land than of old. Of course. I ould not say just what the need of our particular soil would be. The mount of lime commonly used per cre is two tons of ground limestone, r one ton of burnt lime.—Southern griculturist.

GABBY GERTIE

"It isn't always safe to sit in a dress that's supposed to be satin."

Report Reveals Whale Supply Is Decreasing

Washington.-The study of vitamins A and D and the abundance of phytoplankton and zooplankton (basis of fish life) receive considerable attention in the annual report of the commissioner of fisheries for the fiscal year ended June 30, 1931.

Decreased supplies of whales and ovsters are predicted, unless strenuous conservation methods are adopted. Seal herds continue to increase and computation showed a total of 1,045,-101 fur seals in the Pribilof islands herd on August 10, 1930-an increase of 73,574 animals, or 7.57 per cent, over the corresponding figure of 1929.

The world catch of whales has increased from about 12,000 in the calendar year 1920 to more than 27,500 in 1929, and the production of whale oil increased from nearly 20,400,000 gallons to 93,400,000 gallons in this ten year period.

Whale fishing has been intensified in all seas by the development of floating factory ships with a displacement up to 30,000 tons.

Archaeological Work

Shows Increase in U.S.

Washington.—In contrast with past business conditions, and slightly ahead of those of the present, archaeological recearch is experiencing a boom in southwest United States.

With activity centering around Santa Fe, N. M., 34 permits were issued during the past year to various scientific institutions and universities. while 22 were issued the previous year.

Prediction of requests for a greater number of permits for next year has been made by Jesse U. Nusbaum, consulting archeologist in charge of the archeological laboratory at the point

College Boy Changed Little in Last 40 Years

Bethlehem, Pa.-Dr. Charles Russ Richards, president of Lehigh university, looked at the college boys of 40 years ago and those of today and found little difference between them. The student today may be "a bit more sophisticated," Doctor Richards said, but now, as 40 years ago, there are two broad classifications among the undergraduates, "those in college for a good time and those who have a definite objective."

Robbery Recalls Days

of Road Agent Activity Bannack, Mont.-Once the center of operations for road agents in the stirring vigilante days, Bannack has slept peacefully for some forty years.

Now the revitalized gold mining industry is bringing people back.

For the first time in the memory of most residents, a robbery occurred here recently.

Two men robbed Monte Vurdick's bar of \$800.

Examination in Psychology 79

By JANE OSBORN

(© by McClure Newspaper Syndicate.)
(WNU Service.)

WHEN Lois woke up that bright day in May the sun was streaming into her little blue and pink bedroom, and even in the moments of half slumber before she opened her eyes she felt that something was wrong. Then she remembered.

She had gone to a dance with Robert Granger the night before. She had gone—though for some reason she had felt that she ought not to go-because then she felt that she really liked Robert very much, liked him well enough to marry him. Robert had said he wanted to ask her an important question that night. She remembered now that she felt a real loathing for the Robert who had made that stammering declaration as they drove home, narrowly missing a telegraph pole and a passing car as he tried to drive and propose at once. Somehow Robert had managed-when he wasn't dancing with her-to get himself drunk-foolishly drunk. The drunk Robert she loathed.

So that was the trouble, thought Lois, settling herself indolently against the pillows. Perhaps it wasn't a trouble at all-it was just fortunate that she had realized before it was too late the real nature of this Robert she had once liked.

But there were other disturbing thought waves passing through her mind-something else was wrong.

It had suddenly dawned on Loisthough she had forgotten the fact in her hazy moments of waking-that this was the morning set for the final examination in psychology 79. Of course, she had known it the day before-she had crammed all the afternoon—and it was because of the examination that she had hesitated about going to the dance with Robert,

Suddenly as she was hurrying into the neat little blue sport frock she had chosen for the day she realized that there wasn't the slightest advantage in hurrying now. Even if she went off to college without eating any breakfast she wouldn't arrive until after eleven-too late for the examination.

Lois completed her dressing with considerable leisure—taking more than usual pains with the arrangement of her hair and the placing of the faint bit of rouge which she considered necessary to hide the traces of fatigue.

An hour later-at a little after eleven o'clock-Lois entered the office of Professor Stratton, well known psychologist, who lectured in Psychology 79. He was a genial looking man of sixty, who at the moment sat at his desk with head turned to gaze lazily at the green campus trees through the open window in his office.

"I am sorry, Doctor Stratton," she said, "but I didn't wake up in time to get to the examination this morning. I would like to get credit, of course-though I hardly like to ask for a special examination.

Doctor Stratton regarded Lois without much show of personal interest. The fact was, he was always bored by the type of scatter-brained students of which apparently this young woman was typical. He told her that professors were not required to give special examinations save in cases of illness. Still he might regard her failure to wake in time for the examination in the nature of illness-mental if not physical. But he couldn't be bothered writing out a special examination for her. He would put it up to his assistant-Mr. Platt.

And so matters were arranged for a special examination the next morning at nine o'clock in Mr. Platt's small private office, and much relieved at this turn of events Lois went homerecalling as she went a few conversations she had had with the young instructor.

"I have Doctor Stratton's permission to give an oral examination," Mr. Platt explained the next morning. "After all if I am anything of a psychologist I ought to be able to get your rating in the course rather easily.

After this obviously premeditated introduction the young man looked a little confused and then laughed. Lois laughed, too. She said she liked the idea. There were things she could say about psychology that she couldn't write-because she wasn't always sure how to spell the words.

He asked a few questions-which he considered adequately answered after a few faltering remarks from Lois. A quarter of an hour of this and then it was over. He said he would give Doctor Stratton a good report.

Lois rose to go and Mr. Platt rose, too. "I am awfully glad you did oversleep," he said, "because I've had a chance to know you a little better. Perhaps you'll give me permission to call some time.'

Lois gave the young instructor an appraising glance. "I'd be charmed," she said. "Perhaps you could come this afternoon." Late that summer Professor Strat-

ton opened a letter from his young

assistant. He read it with an expression of half-amusement, half-boredom. "So it goes," he said to his wife, "Feather-brained young woman oversleeps on morning of important examination which she possibly couldn't have passed. Clever young instructor gives her a rating of ninety-eight in fifteen minutes test-and within two months has taken her for his life mate."

**************************** BETTY'S BILL

By CORONA REMINGTON

********************************* (© by McClure Newspaper Syndicate.)
(WNU Service)

BIG Bill Collingsworth strode up the front steps of the Desmones home with the air of a conquering hero. He gave the door bell a sharp little punch and in a moment Betty herself had opened the door and stood before him, pink and radiant.

"I knew it was you by the way you rang," she said, when they had exchanged the usual greetings. "You have good news, too."

By this time they were walking slowly toward the living room, his arm flung lightly about her shoulder.

"I have," he answered standing stock still. "The greatest news that anyone ever had in this whole world. Get your frills ready, we're going to be married soon.

"Bill!" she exclaimed, giving his hand a little squeeze. "Tell me, do! I can't wait to hear. Let's sit down quick before I fall."

"You know old John Tollman? Mean old devil, but he's got the kale all right. Well, he was in a street car accident not long ago and he's engaged me to take the case and recover damages. Me! Can you believe it. We ought to be able to get married on the fee.'

"Bill Collingsworth, you're the greatest lawyer in this whole city full of men. Tve always known it and now the world's beginning to find it out," said Betty, looking adoringly at her fiance.

When old Tollman entered Bill Collingsworth's office the next day the young lawyer experienced a sudden revulsion of feeling as his swift glance took in the crabbed old face, the colorless lips, the diamond stickpin and the heavy fur coat of his prospective client.

"Well, young man," he began, throwing off his coat and dropping stiffly into a chair. "I hear you're a smart chap and that's the very kind I'm looking for. This is going to be a hard case, the company will contest it on the grounds that it was my fault, but I'm a good client. I'll do and say what my lawyer tells me." He winked at young Collingsworth and continued, and I got a bunch o' witnesses who are willing to do the same," he ended laughing loudly and slapping his

leg. "I'm sorry," said Collingsworth rising, his face drawn and white, "but I'm afraid I'm not just the kind of an attorney you need. I don't believe I could handle your case."

"I guess I must have come to the wrong place," snarled Tollman, his jovial manner suddenly gone. reckon you ain't a lawyer at all but a Sunday school teacher."

With that he walked out, and a moment later a very sad young man left the office building and made his way to the Desmones home.

"I'm proud of my Bill," said Betty after she had heard the story, "and what do you care? Something better

may come along any day." Disconsolately, he returned to his office. It poured all day and not client came near. The whole week was a nightmare. It seemed as if every one had forgotten him.

After days of silence the jangling of the telephone at his elbow made him start suddenly.

"This is Harrison of the Railway and Light company," said a hearty voice. "Could you come down to my office some time this afternoon?

Collingsworth silently swallowed amazement and consulted a blank date book.

"Let's see," he said over the wire. "One o'clock . . . Two . . . I could see you for half an hour from threethirty to four. Will that do?" "Fine!" answered Harrison. "I'll

expect you then. Goodby." "Now, what d'you suppose he wants with me?" muttered Collingsworth

after he had hung up. But he could not solve the problem, and it was nearly four o'clock before

he found out. "Heard something about you the other day," said Harrison when greetings were over. 'Somebody told me that you had refused the Tollman case because you didn't think he was using

honest methods.' "I didn't say anything of the sort," answered Collingsworth hotly. simply refused the case without explanation. My reason for doing so are my own.

"That's all right, son, I understand," soothed the older man. "I just want to tell you that you've got a backbone and I like your business methods. Crookedness may get by for awhile but honesty stands the test of time. Now, I've been enquiring about you and you seem to be a pretty smart young man. Mr. Eckel, our attorney for the past twenty years, is retiring the first of the year and going abroad to live. How'd you like to step into

Collingsworth gripped the arm of his chair and struggled to modify the ecstacy in his voice as he spoke.

his shoes?"

"Frankly, I think I'd like it mighty well." he answered after a moment.

"That's the way for a man to talk; no beating around the bush. All right, you can come around the first of the week and we'll fix up the papers."

Collingsworth rose abruptly. "I have an important engagement," he said blushing.

"All right, young man, you run along and tell her," laughed Harrison, ciapping him on the back. "I had just such an engagement once my-

Annual Tax Sale

State of Michigan, County of Van Buren, ss.
The Circuit Court for the County of Van Buren in Chancery.
In the matter of the petition of Oramel B. Fuller, Auditor General of the State of Michigan, for and in behalf of said State, for the sale of

certain lands for taxes assessed thereon.

On reading and filing the petition of the Auditor General of the State of Michigan praying for a decree in favor of the State of Michigan, against each parcel of land therein described, for the amounts therein specified, claimed to be due for taxes, interest and charges on each such reveal of land, and that such lands he sold for the amounts so claimed by parcel of land, and that such lands be sold for the amounts so claimed by

the State of Michigan.

It is ordered that said petition will be brought on for hearing and decree at the March term of this Court, to be held at the Village of Paw Paw in the County of Van Buren, State of Michigan, on the 21st day of March, A. D. 1932, at the opening of the Court on that day, and that all persons interested in such lands or any part thereof, desiring to contest the lien claimed thereon by the State of Michigan, for such taxes, interest and charges, or any part thereof, shall appear in said court, and file with the clerk thereof their objections thereto on or before the first day of the term of this Court above mentioned, and that in default thereof the same will be taken as confessed and a decree will be taken and entered as prayed the confessed and a decree will be taken and the confessed and a decree will be ta for in said petition. And it is further ordered that in pursuance of said decree the lands described in said petition for which a decree of sale shall be made, will be sold for the several taxes, interest and charges thereon as be made, will be sold for the several taxes, interest and charges thereon as determined by such decree, on the first Tuesday in May thereafter, beginning at 10 o'clock a. m. on said day, or on the day or days subsequent thereto as may be necessary to complete the sale of said lands and of each and every parcel thereof, at the office of the County Treasurer, or at such convenient place as shall be selected by him at the county seat of the County of Van Buren, State of Michigan; and that the sale then and there made will be a public sale, and each parcel described in the decree shall be separately exposed for sale for the total taxes, interest and charges, and the sale shall be made to the person paying the full amount charged against such parcel, and accepting a conveyance of the smallest undivided fee simple interest therein; or, if no person will pay the taxes and charges and take a conveyance of less than the entire thereof, then the whole parcel shall be offered and sold. If any parcel of land cannot be sold for parcel shall be offered and sold. If any parcel of land cannot be sold for taxes, interest and charges, such parcel shall be passed over for the time being, and shall, on the succeeding day, or before the close of the sale, be reoffered, and if, on such second offer, or during such sale, the same cannot be sold for the amount aforesaid, the County Treasurer shall bid off the same in the name of the State.

Witness the Hon. Glenn E. Warner, Circuit Judge, and the seal of said Circuit Court of Van Buren County this 19th day of January A. D.

Glenn E. Warner, Circuit Judge.

Countersigned, Earl A. Thomas, Clerk. (Seal)

STATE OF MICHIGAN

To the Circuit Court for the County of Van Buren in Chancery:

The petition of Oramel B. Fuller, Auditor General of the State of Michigan, for and in behalf of said State, respectfully shows that the list of lands hereinafter set forth and marked "Schedule A," contains a description of all lands in said County of Van Buren upon which taxes were assessed for the years mentioned therein, and which were returned as delinated for the pears mentioned therein, and which taxes here not been positive. quent for non-payment of taxes, and which taxes have not been paid; together with the total amount of such taxes, with interest computed thereon

to the time fixed for sale, and collection fee and expenses, as provided by law, extended against each of said parcels of land.

Your petitioner further shows to the Court that said lands were returned to the Auditor General under the provisions of Act 206 of the Public Acts of 1893, as delinquent for non-payment of said taxes for said years respectively, and that said taxes remain unpaid; except that lands included in said "Schedule A" for taxes of 1890 or prior years were returned to the Auditor General as delinquent for said taxes under the provisions of the general tax laws in force prior to the passage of Act 200 of the

Public Acts of 1891, and which taxes remain unpaid.

Your petitioner further shows that in all cases where lands are included in "Schedule A' as aforesaid for taxes of 1890 or of any prior year, said lands have not been sold for said taxes or have been heretofore sold for said delinquent taxes and the sale or sales so made have been set aside by a court of competent jurisdiction, or have been cancelled as provided by

Your petitioner further shows and avers that the taxes, interest, collection fee and expenses as set forth in said "Schedule A" are a valid lien on the several parcels of lands described in said schedule.

Your petitioner further shows that the said taxes on the said described lands have remained unpaid for more than one year after they were returned as delinquent; and the said taxes not having been paid, and the same being now due and remaining unpaid as above set forth, your petitioner prays a decree in favor of the State of Michigan against each parcel of said lands, for the payment of the several amounts of taxes interest, collection fee and expenses, as computed and extended in said schedule against the several parcels of land contained therein, and in default of payment of the said several sums computed and extended against said lands, that each of said parcels of land may be sold for the amounts due thereon, as provided by law, to pay the lien aforesaid.

And your petitioner will ever pray, etc. Dated January 18, 1932

Oramel B. Fuller. Auditor General of the State of Michigan, for and in behalf of said State.
